

**elmex**

since 1963

Converging  
Innovations  Expanding  
Solutions

**Solutions For  
Connectivity**

**2023**

'elmex' is a pioneer in the field of electrical wire termination technology in India.

'elmex' started its journey in 1963 with the manufacturing of DIN rail-mounted Clip-On type terminal blocks for application in switchgear and controlgear products, a niche segment in electrical industry.

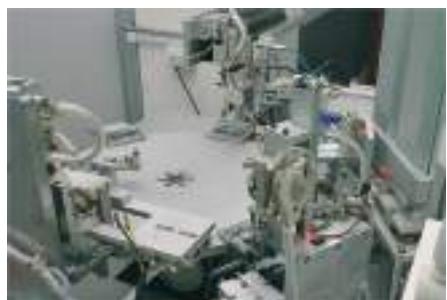

As envisioned by our founder and Chairman, 'elmex' has moved from strength to strength and is regarded as a brand of high repute and trust.

With the objective to serve larger segment of electrical industry, 'elmex' added low voltage current transformers (CT) and voltage / potential transformers (PT) along with measurement instruments in its product range in the year 2013. At the same time, 'elmex' became the first indigenous manufacturer of connectors for **photovoltaic** applications and now has range of products for application in this **renewable energy** sector.

Over period of almost six decades, 'elmex' is now seen not only as a leader in termination technology but also a solution provider for spectrum of applications.

Customer Focus has always been the prime mover for People, Process and Product at 'elmex'.

'elmex' as a responsible corporate citizen conducts business in a sustainable manner benefitting customer, stakeholders, industry it serves and society at large.

# Converging Innovations

# Expanding Solutions

'elmex' has achieved notable milestones on various fronts while reaching its present level of competence. With emerging changes and trends in technology, 'elmex' has always aligned its processes in line with industry standards and customer requirements.

We at 'elmex' have vertically integrated infrastructure. Right from product conceptualization stage, we carry out all processes viz. product design, tool design, manufacturing of tool, part production, product assembly, inspection, tests etc., in house thereby giving us flexibility and efficiency in our operations.

We have state of the art plant and machinery, capable of producing parts and products with high precision and in conformance with design specifications.

Our people are our strength; their competence, commitment and openness to learn has resulted into improvement on continuous basis.

'elmex' approach to serve customer and technological competence have led many multinationals to choose 'elmex' as their global sourcing partner. 'elmex' brand equity is reflected by the fact that we serve some of the biggest names from national and multinational companies such as ABB, BHEL, GE, Hitachi, Honeywell, L&T, NTPC, Schneider Electric, Siemens, Yokogawa etc.

'elmex' is regarded as a trustworthy and reliable partner when it comes to product quality. 'elmex' manufacturing plants and design functions are accredited with ISO 9001:2015 certification for Quality Management System and ISO 14001 : 2015 for Environmental Management System, certified by TUV SUD South Asia Pvt. Ltd.

'elmex' products carry certification marks from Underwriter's Laboratories Inc. - USA & Canada, CSA Canada, UL international, Demko A/S – Denmark, Intertek SEMKO-Sweden, SGS Fimko – Finland, Nemko – Norway, DNV GL Presafe – Norway and TUV Rheinland.

Solutions For  
Connectivity

Solutions For  
Solar Photovoltaic

Solutions For  
Metering & Protection

Solutions For  
Control & Instrumentation

Solutions For  
Railways

Solutions For  
Oil & Gas Industry

## Solutions for Connectivity

'elmex' offers a wide range of Terminal Blocks offering connectivity solutions for various applications, such as-Simple Feed Through Circuits, Earthing Connection, Test Disconnect and Fuse Protection Functions. The Range includes Terminal Blocks with Screw Clamp or Spring Clamp Construction and are available for Low current as well as High Current Applications, conforming to various International Standards.

## Solutions for Solar Photovoltaic

Non-conventional and Renewable sources of energy will play a significant role in meeting energy demands of the future. Solar Energy is one such measure which has vast potential to be tapped through the application of Photovoltaic (PV) Technology. To serve this segment of industry, 'elmex' has extended its domain knowledge in termination technology to develop solar connectors and solar junction boxes for Solar Photovoltaic Applications. 'elmex' has developed these products by indigenous design and development initiatives for PV applications and 'elmex' has the distinction of being a pioneer to make these products in India.

## Solutions for Metering & Protection

Further, with the endeavour to serve larger segment of electrical industry, 'elmex' added Low Voltage Current Transformers (CT), with Polycarbonate Casing for Metering and Protection applications. 'elmex' was one of the first companies in India to get its Current Transformers tested as per international Standard IEC 61869-2 (replacing standard IEC 60044-1, Published in 1996).

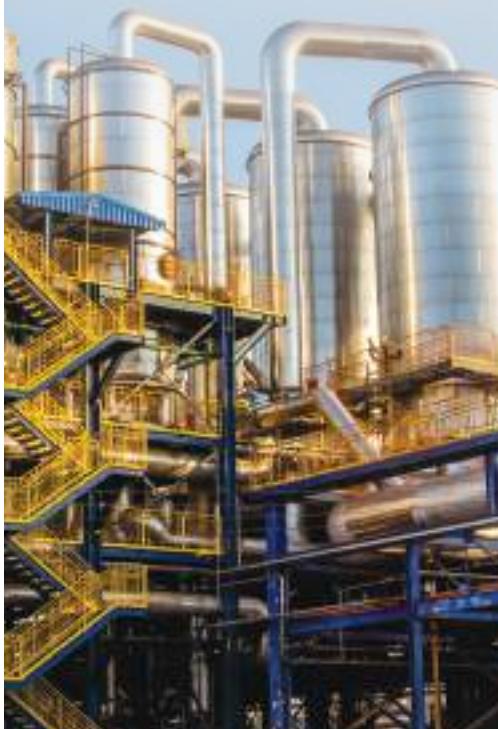

## Solutions for Control & Instrumentation

'elmex' offers innovative solutions to Control & Instrumentation industry enabling modular design of electronic controls. 'elmex' range of Interface Modules, Relay Terminal Units, Termitronix Control Elements, icontrol Terminal Blocks are specifically designed for C & I applications. With these products, it is possible to use add-on concept or modification or enhancements in control circuits, even during service.

## Solutions for Railway

Indian Railway being world's largest Railway network needs products that are reliable and efficient. 'elmex' offers reliable and maintenance-free electrical connections for applications ranging from signalling to rolling stock in locos, along the track and on stations. 'elmex' terminal blocks are designed and constructed for such applications and their performance is evaluated for Mechanical, Electrical, Thermal, Climatic and Vibration test as per specifications laid down by Railway (RDSO, CLW).

## Solutions for Oil & Gas Industry

While product approvals as listed previously are good enough for general industrial applications, there are applications in Oil & Gas Industries where explosive gas atmosphere is present. 'elmex' terminal blocks are designed, constructed and tested meeting the safe working requirement as specified in product Standard EN 60079-7 for increased safety 'e' and EN 60079-11 for intrinsic safety 'i' and are certified by notified body i.e. DNV GL Presafe AS.

# 'elmex' TERMINAL BLOCK TECHNOLOGY

**Basic Construction:** 'elmex' Terminal Blocks are mounted on 35, 32 or 15 mm Standard Rails types: TH35, G32, TH15 (IEC60715) or TS35, TS32, TS15 (DIN EN Standard). The Terminal Blocks have a modular design, so that they can be installed side by side, simply by clipping-on, to form a uniform assembly on mounting rails. This feature yields simplicity, economy and compactness in installation and allows for desired future extensions.

A typical Feed-through terminal block consists of :

## 1.0 Insulation Housing : Standard Designs with

- 1.1 Polyamide 6.6
- 1.2 Melamine

## 2.0 Conductor Clamping : Standard Designs with

- 2.1 Screw clamps - Steel
- 2.2 Screw clamps - Spring loaded
- 2.3 Screw clamps - Copper alloy
- 2.4 Spring clamps
- 2.5 Stud-and-nut clamping for cable lugs

## 3.0 Current bar : Current carrying part of Terminal Block

- 3.1 Copper
- 3.2 Copper Alloy : (Brass / Phosphor Bronze)

## 4.0 Mounting Springs : For mounting on 32 mm rail (TS 32/G32), in case of Melamine Housings.

'elmex' terminal blocks can accept solid and stranded conductors as well as flexible conductors of size up to rated connection capacity, as specified in the detailed specification sections of this catalogue.

The above basic construction is developed further into various individual types of Terminal blocks for different applications, such as multilevel types, Earth Terminals, Distribution Blocks, Fuse Feed Through types, Test Disconnect Terminal Blocks, Component Housing etc.

## 1.0 Insulation Housings

Two types of insulation housings are employed in 'elmex' terminal blocks

1. Thermoplastic : Polyamide 6.6, Injection Moulded
2. Thermosetting : Melamine, Compression Moulded

**Polyamide 6.6 (or Nylon 6.6)** is a resin belonging to the Nylon family of thermoplastic moulding materials.

Polyamide 6.6 possesses a good balance of various properties: - tensile and flexural strengths, allowable service temperature, impact resistance, abrasion resistance, resistance to fuels, lubricants and many chemicals (except strong acids and oxidizing agents). It has good electrical properties, for low voltage applications. It is resistant to surface discharge with CTI > 600 (IEC-60112).

**Melamine** is a resin belonging to the group of thermosetting compounds, generally known as aminoplasts. It has an excellent resistance to deformation, particular hardness and a very good surface brilliance.

Melamine has an optimum dimensional stability and a strong resistance to surface discharge with CTI > 600 (IEC-60112). It does not ignite and gets converted into char form in case of fire. It is abrasion and chemical resistant, waterproof and resists high and low temperatures within the limits of -40 °C and 130 °C.

Melamine is particularly suited for use in severe environmental conditions and is preferred for Circuit Breaker Panels, Refineries, Chemical Plants, potentially explosive installations and any other high risk environments in general.

## 2.0 Conductor Clamping

### 2.1 Screw Clamp (Steel)

**2.1.1 Contact Clamp :** 'elmex' Screw Clamp consists of a U-shaped steel part, called contact clamp and a washer base or cheese head screw.

The vertical arms of the contact clamp are folded at the top end into lips, overlapping each other. The lip from each arm locks into recess provided on the other arm. This double locking is an

outstanding feature of '*elmex*' Screw Clamp design, which allows tightening torques in excess of the values specified by the Standards. In addition, in the event of inadvertent over tightening, this design prevents damage to the threads and deformation of Contact Clamp.

The bottom face of the 'U' has serrations, which grips the conductor firmly during tightening. The lips are drilled and threaded coaxially in a special machine to produce rolled threads for higher mechanical strength of threads which can take higher tightening torque.

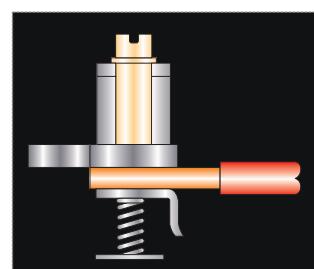

The Contact Clamp undergoes Heat Treatment for increased hardness and strength. It is then zinc plated and passivated to a higher degree of plating thickness than usually adopted. '*elmex*' Screw Clamps therefore have a very good resistance to normal atmospheric corrosion.

**Heat Treatment:** '*elmex*' Contact Clamps are subjected to a special heat treatment process ensuring uniformity of temperature over the entire clamp surface and over the threads to achieve uniform and strong wear resistance.

## 2.2 Screw Clamp - Spring Loaded

For high-vibration applications '*elmex*' offers spring loaded Screw Clamp Terminal Blocks. Although '*elmex*' standard screw-clamp design is already resistant to vibrations, it is further strengthened against vibrations by provision of compression springs in the terminal block.

The springs are assembled under the contact clamp in pre-stressed condition. When the screws are fully tightened up to specified torque, the springs under the contact clamps provide additional pressure between current bar and conductor, which makes the spring loaded terminals especially suitable for high vibration applications.

The compression springs are made of standard spring-steel. All other parts are same as for the Screw-Clamp design.

## 2.3 Screw Clamp (Copper-alloy)

In the '*elmex*' design of copper-alloy terminal blocks, the Steel Screw-Clamp is replaced by copper-alloy screw-clamp. Protection against atmospheric corrosion of copper-alloy is achieved by tin plating in a controlled plating process. The tin plating has under-coat of nickel plating to prevent zinc migration.

By appropriate selection of materials and processes, the phenomena of stress corrosion cracking is taken care of in '*elmex*' copper-alloy screw-clamp.

The clamping part in '*elmex*' screw clamp is of special design, such that as the conductor clamping is achieved by tightening of screw, the top-portion bends elastically, so that screw threads are gripped to prevent loosening.

## 2.4 Spring Clamps

'*elmex*' spring clamp consists of specially shaped stainless steel clamp, which functions as a spring for developing necessary contact pressure between current bar and conductor. Current Bar is the current carrying part in the terminal block and it is provided with serrations to grip the conductor.

The spring clamp is brought under tension by inserting a screwdriver. This creates necessary opening in clamp for inserting conductor. After the conductor is fully inserted the screwdriver is withdrawn. The clamp arm thereby presses the conductor firmly against current bar, by spring action of the clamp.

## 2.5 Stud-and-Nut Clamping for Cable-Lugs

This conductor-clamping design is especially developed for receiving Ring-type or Fork-type cable lugs. The terminal block consists of Housing, Studs and Nuts and the current bar. The Ring type lugs can be inserted in studs, while fork type lugs are inserted under Nuts.

The lugged cables are clamped to the current bar by tightening the nuts. Standard spanner can be used in case of "Nut-Driver" type of Stud terminals. For Screwdriver operated stud terminals, the stud is provided with a special long-nut with a slot at the top

for screwdriver. This type is especially developed for applications where space-limitations may not allow the use of spanner for clamping cable-lugs.

All the metal parts in these types of terminals are made of copper alloy and tin plated with Nickel under coat for protection against atmospheric corrosion.

### 3.0 Current Bar

'elmex' Current Bars are made of electrolytic copper or a high quality copper alloy and tin plated with higher than usual plating thickness, to maintain the contact surface free from atmospheric corrosion. Nickel under coat prevents zinc migration in case of copper alloy current bars.

Special features of 'elmex' current bars are the provision of longitudinal serrations to grip the conductor while tightening and cut into thin oxide film of conductor. The contact resistance remains very low, once the conductor is firmly clamped.

### 4.0 Mounting Spring

The spring used in Melamine Terminal Blocks for fixing them on the rail is made of high grade Stainless Steel to retain the spring tension over a longer period. The design of the terminal housing incorporates a notch so as to provide a self-locking mechanism to prevent the spring from slipping out of the housing.

## SPECIFICATIONS AND TESTING

### Specifications

'elmex' Terminal blocks comply with International Specifications IEC- 60947-7-1 : Low voltage switchgear and controlgear, Part 7 – ancillary equipment, section 1 – Terminal Blocks for copper conductors.

- |  |                               |
|--|-------------------------------|
| 1. UL1059 : Terminal Blocks (USA – Standard) | 3. ATEX: 2014/34/EU Directive |
| 2. CSA C22-2 No. 158-10 (Canadian standard)  | 4. EN 60947-7-1               |

In addition, 'elmex' carries out other special tests also, such as, Salt Mist Test, Environment cycle test, Insulation Resistance Test, Capacitance Measurement etc.

### Testing

**Testing & Evaluation** is the backbone of product development and continuous quality improvement. Our major strength derives from the top priority it has always given to establishing **testing facilities on the shop floor and in the laboratory**.

For the purpose of product-approvals as required by 'elmex' customers, various types of terminal-blocks have further undergone comprehensive testing and verification for compliance with other International standards.

Two kinds of testing are done here – one is where product testing is conducted as part of the manufacturing process to ensure quality and the second is at R&D where new products undergo **extensive in-house testing** before they are cleared for regular manufacturing.

The following tests are conducted on standard products during manufacturing:

- |   |   |  |
|---|---|--|
| <input checked="" type="checkbox"/> Insulation Inflammability Test<br><input checked="" type="checkbox"/> Insulation Resistance & HV Test | <input checked="" type="checkbox"/> Torque Test and Pull-out Test<br><input checked="" type="checkbox"/> Voltage Drop Tests | <input checked="" type="checkbox"/> Plating Thickness Test<br><input checked="" type="checkbox"/> Solderability Test |
|---|---|--|

The tests conducted at the R&D level are much more rigorous than type tests. Our Test Laboratory set-up conforms to Testing and Calibration Standards and all tests are conducted by technically qualified and experienced staff. Our test Laboratory is approved by UL / CSA for their witness test data programme.

Type tests are conducted as per IEC, EN, UL and Canadian standards (CSA). These include:

- |   |   |  |
|---|---|--|
| <input checked="" type="checkbox"/> Temperature Rise Test<br><input checked="" type="checkbox"/> Pull Out Test<br><input checked="" type="checkbox"/> Mechanical Strength Test (Clamping Units)<br><input checked="" type="checkbox"/> Flexion Test | <input checked="" type="checkbox"/> Ageing Test (for Screw less Terminal Blocks)<br><input checked="" type="checkbox"/> Service Life (for Test-Disconnect Terminal Blocks)<br><input checked="" type="checkbox"/> Voltage Drop Test | <input checked="" type="checkbox"/> Mechanical Endurance Test (for custom-made switches as Reliability Test)<br><input checked="" type="checkbox"/> Dielectric Test (power frequency)<br><input checked="" type="checkbox"/> Verification of Thermal Characteristics<br><input checked="" type="checkbox"/> Thermal Aging Test |
|---|---|--|

We also get tests conducted at Nationally Accredited Laboratories. The main ones include:

- |   |   |  |
|---|---|--|
| <input checked="" type="checkbox"/> Impulse Voltage Withstand Test<br><input checked="" type="checkbox"/> Short-time Current Withstand Test | <input checked="" type="checkbox"/> Salt Mist Spray Test<br><input checked="" type="checkbox"/> Environmental Tests | <input checked="" type="checkbox"/> Vibration Test |
|---|---|--|

Some of the tests, required by the standards, are described here as technical information.

### Salt Mist Test

The **Salt Mist Test** is defined and described in **Part XI** of the Indian Standards IS-9000 on **Environmental Testing Procedures**. Its detailed description covers Test Chamber Design, Pre-conditioning, Test Procedures, Salt Solutions for Tests, Actual Testing, Recovery and Performance Assessment.

The Test Chamber details are basically meant for Test Laboratories. Pre-conditioning involves cleaning of specimens just before the test. The standard defines **three Test Procedures: No. 1 for components and Nos. 2 & 3 for equipment**. Procedure No. 2 is applicable where there is severe salt contamination, while No. 3 is applicable where salt laden atmosphere is occasional.

**For terminal blocks, procedure No.1** is applicable. The salt solution for this procedure is normally **5% sodium chloride solution**. Components are exposed to salt mist spray in test

chamber for **48 or 96 hours** ('elmex' has tested for 96 hours). After the test, salt deposits are cleaned gently, leaving the specimen for 2 to 4 hours in normal atmosphere ("recovery" procedure). The criteria for passing the Test successfully is visual examination.

**Procedures 2 & 3** have salt solutions containing various chlorides, bromides, sulphates, etc. which **raises severity of the test**. After exposing the equipment to the Salt Mist spray for 2 hours in the test chamber, it is subjected to **damp heat for 22 hours (procedure-3)** and **7 Days (procedure-2)**. Finally the equipment is checked if it has passed the test successfully as per the criteria laid down by the relevant equipment standard.

## Insulation Inflammability test

IEC 60947-7-1 specifies that "the insulation materials of terminal blocks shall not be adversely affected by abnormal heat and fire", (clause 7.1.5). To verify compliance with this requirement, the Needle Flame Test is specified in clause 8.5 ("verification of thermal characteristics").

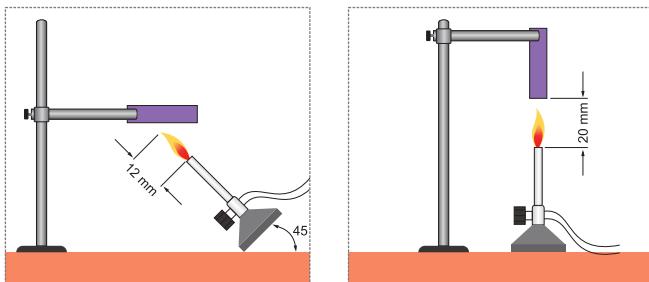

Illustration showing testing according to IEC and UL standards.

As its name suggests, a flame of the size of a needle, as defined in IEC 60695-11-5 (on fire hazard testing), is used to perform the test. Three terminal blocks, one at a time, are tested after pre-conditioning for 24 hours in an atmosphere with temperatures between 15 °C and 35 °C and relative humidity between 45% and 75%.

The Terminal Block being tested is mounted in the specified manner and a well-defined single layer tissue paper, placed on a

pine wood board, is kept below the insulation face of the Terminal block at a distance of (200 ± 5) mm. The test flame is directed at the specific area of the insulation wall at an angle of 45°. If the thickness of insulation wall is less than 1 mm and/or the area is less than 100 mm<sup>2</sup>, the flame is applied for 5 seconds. Otherwise it is applied for 10 seconds. In case the insulation ignites, the duration for the ignition is recorded, which is the time between removal of flame and extinction of glowing (or the flame) from the terminal block.

The tip of test flame has to be directed at the insulation wall in the area of conductor clamping unit, which is the source of internal heating of the terminal block in service.

Terminal Blocks are considered to have passed the test if the insulation does not ignite, or if it ignites, the duration of burning is less than 30 seconds and in addition, the tissue paper does not ignite due to burning particles falling from the insulation wall.

To verify the thermal characteristics, UL standards specify test for insulation materials. These are carried out as type tests by the manufacturer of the materials on test specimens. The IEC test, on the other hand, is carried out on the final product by its manufacturer and hence it verifies both the basic material as well as its application in the construction of the Terminal Block.

## Corrosion Cracking Test on Brass Parts

Brass parts used in Terminal Blocks and containing less than 80% copper are required to withstand the Corrosion Cracking Test, according to Canadian Standard CSA:C22.2 No.158 and US Standard UL 1059.

A phenomenon called "Stress – corrosion cracking" or "Season – Cracking" occurs in brass parts, due to combined action of residual stresses in the brass parts and the effect of certain chemical pollutants in working atmosphere. The residual stresses can be due to cold working, or even due to assembly stresses. The problem of stress-corrosion-cracking is solved by proper selection of the composition of the Copper alloy with addition of certain elements, which prevent cracking and by proper annealing to remove stresses due to cold working.

The test according to the above UL standard consists of immersion of Brass Parts for 15 minutes in an aqueous solution of 100 grams mercurous nitrate and 13 ml of nitric acid, as specified in the UL standard. After the test, the Brass part is checked for cracking visually with normal or corrected to normal vision

## DIRECTIVES AND COMPLIANCE

### ATEX DIRECTIVE

The ATEX directive 2014/34/EU applies to the equipment for use in potentially explosive atmosphere (AT-EX is from French; "atmospheres explosibles").

The directive requires that equipment and its components have to be approved for use in potentially explosive environments.

*'elmex'* terminal blocks, certified as per respective standards EN60079-0, EN 60079-7, and EN 60079-11 have been verified, tested and approved by Det Norske Veristas (DNV) and Presafe, Norway. Further, the ATEX-directive also requires quality system to comply with ISO/IEC 80079-34: explosive atmosphere – Part 34: Application of quality systems for equipment manufacture.

The test requirements as per EN 60079-0 and EN 60079-7 are more severe particularly, Creepage Distances Dielectric Test Values and Range of Service Temperatures. Performance at sub Zero temperatures (-20° C) have also to be verified.

In Petroleum Industry, Oil and Gas Industry, Chemical Industry and such other Industries the probability of explosive materials in atmosphere is high and can also be present in some areas. The ATEX directive essentially aims at preventing mishaps in such industrial applications

*'elmex'* terminal blocks have been approved for application in potentially explosive atmospheres and are classified as follows:

- For surface installation
- Group II
- Category II C
- Zones 1 and 2
- Increased safety "e",
- Type of protection "n" and intrinsic safety "I".

### RoHS DIRECTIVE

The RoHS Directive No 2002/95/EC, issued by European Parliament and Council, is implemented by RoHS Regulations 2004 for restricting the use of certain hazardous substances in electrical and electronic equipment. The Directive is enforced by the Secretary of State for Trade and Industry in European Union with effect from July 1, 2006 and applies to Electrical and Electronic Equipment (EEE) placed on European Union Market thereafter.

The Above Directive 2002/95/EC was repealed with effect from January 3, 2013 and the new Directive 2011/65/EU came into force with effect from January 13, 2013. The new Directive specifies additional requirements for manufacturers relating to creation of technical documentation to demonstrate compliance in respect of maximum concentration values tolerated by weight in homogeneous material, implementing internal production control procedures, drawing up EU Declaration of Conformity and attaching CE mark to the product.

The Directive covers EEE upto 1000V AC (1500V DC) at present and restricts the use of following materials in manufacture of EEE or parts thereof; Lead, Mercury, Cadmium, Hexavalent Chromium, Polybrominated Biphenyls (PBB) and Polybrominated Diphenyl Ethers (PBDE). The last two materials are usually employed for flame retardant property. The Regulation restricts the percentage content of these materials; specify certain exemptions in applying the Regulations and gives guidelines on demonstrating compliance. The enforcement authority namely Secretary of State for Trade and Industry, is empowered to conduct market surveillance to detect non-compliance with RoHS regulations and may even carry out tests for this purpose. The Regulations provide for a specified fine, if the products fail to comply when checked by the enforcement authority.

The list of restricted substances was amended by commission Delegated directive (EU) 2015 / 863 of 31 March 2015. Restricted Substances added to Annexure II to Directive 2011/65/EU are as under (1)Bis(2-ethylhexyl) phthalate (DEHP) (2)Butyl benzyl phthalate (BBP) (3)Dibutyl phthalate (DBP) (4)Diisobutyl phthalate (DIBP)

When the concentration of the above referred substances exceeds the specified limits, their burning (in service, or for waste disposal) and recycling, create products which are hazardous to human health and environment. Strictly speaking, Terminals Blocks as a class of products do not fall under any of the groups of products specified in the RoHS regulations. However, as a responsible Corporate Citizen, *'elmex'* has introduced RoHS compliant terminal blocks, in line with global industry standards.

# FEED THROUGH TERMINALS (KUT SERIES)

'elmex' "K" Series Universal (TS35 mm & TS32 mm) DIN Rail Mounted Feed Through Terminals in Polyamide 6.6 Housing offers the complete range suitable for all control and power applications.

The proven screw-clamp design offers high contact force and is easy to use. The range covers terminals for conductor sizes from 0.5 sq mm to 95 sq mm.

The special foot design provides a slot for easy mounting and removal of a single terminal from a stack, using a screwdriver.

There are applications that require the distribution of a single incoming supply to two or three outgoing loads for which multiple output terminal blocks are used. These terminal blocks have single input and the current fed through this input is branched out from more than one output terminals by a common current bar.

This solves the applications which need the distribution of an incoming supply in to 2 or 3 circuits without adding to the stack length of the arrangement since these terminal blocks are of same pitch of the standard terminal block.

This also eliminates the cost related to the use of additional accessories like shorting links and the labour cost related to the same.

# EARTH TERMINALS

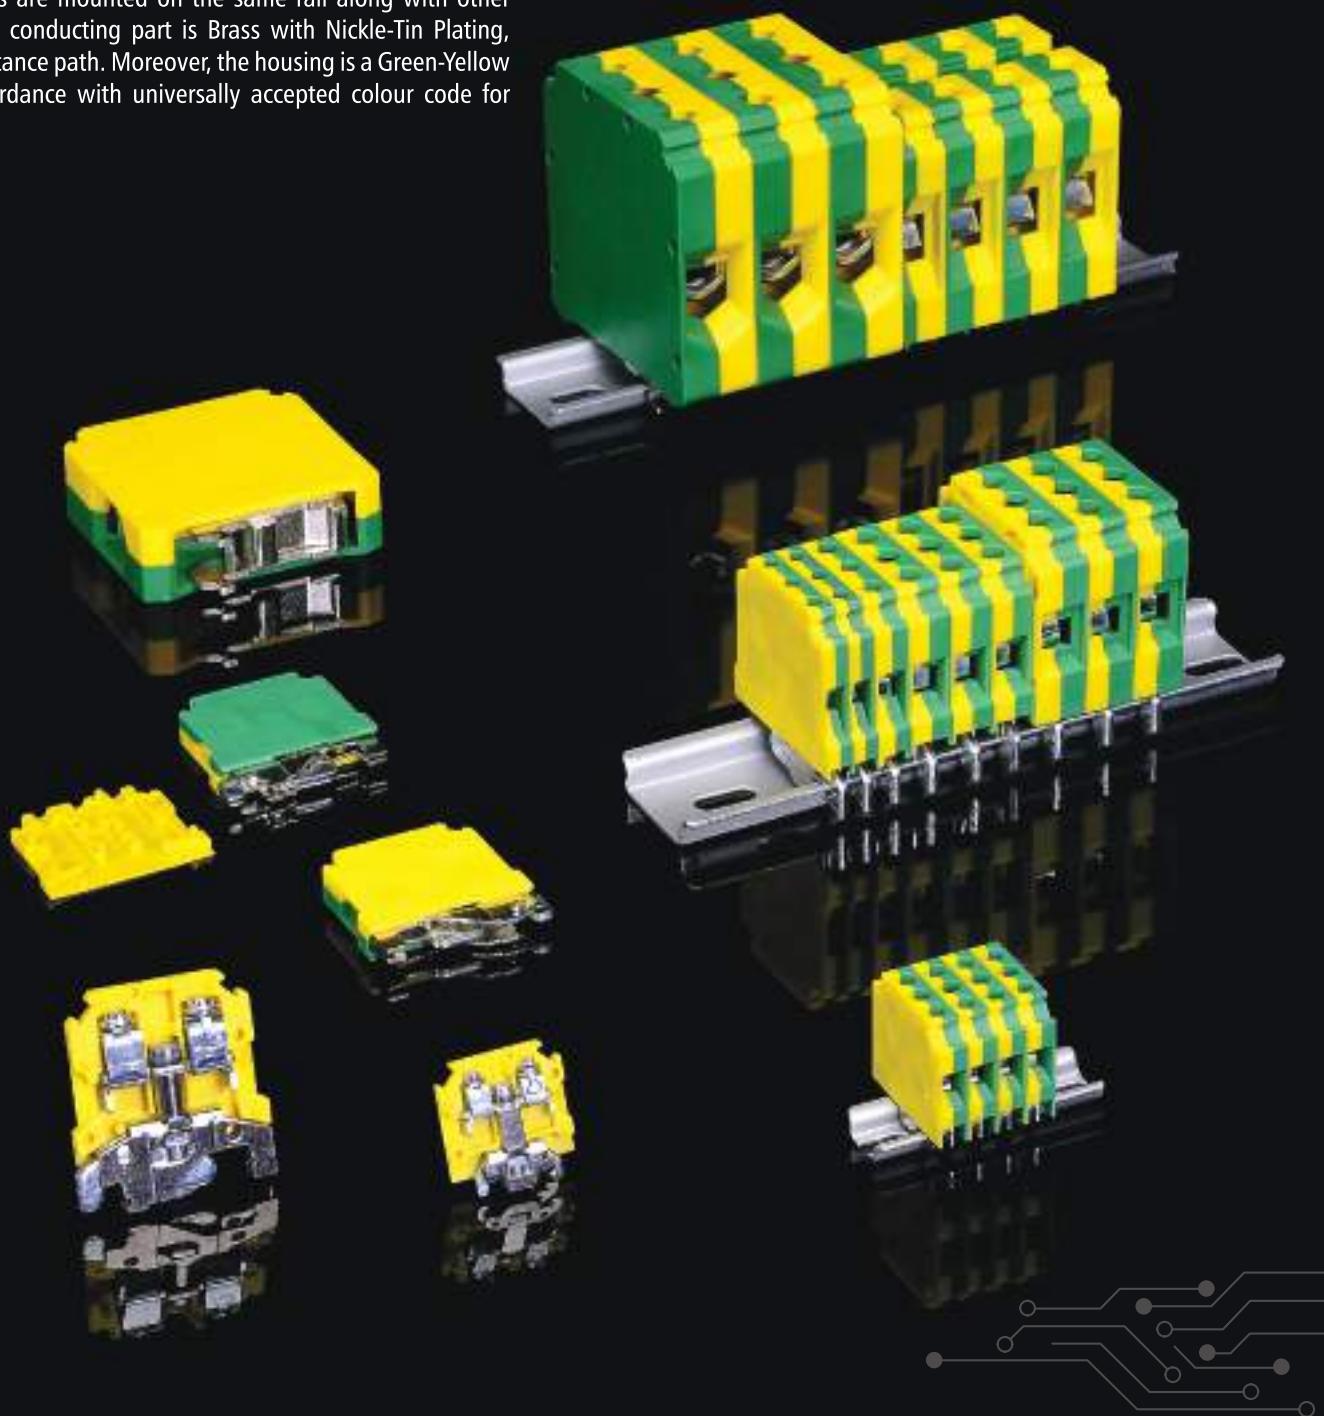

'elmex' Earth Terminal Blocks replace conventional Bus Bar used for earthing. The structural design is such that the mounting rail not only has a mechanical but also an electrical function. Earthing is established through the foot which clamps directly onto the rail.

Earth Terminal Blocks are mounted on the same rail along with other Terminal Blocks. The conducting part is Brass with Nickle-Tin Plating, providing a low resistance path. Moreover, the housing is a Green-Yellow combination in accordance with universally accepted colour code for earthing.

'elmex' Multi Level Terminals are the perfect solution where space is a constraint and high density wiring is needed. The compact design of these Terminals with 6 mm thickness allows double wiring density reducing the total number of terminal blocks to half.

KUDD 4 terminal is specially recommended as its upper level is offset laterally by half of the terminal block pitch. This offers better accessibility to the lower connection screws and better visibility of the lower marking labels.

KU2D 4 terminal blocks with internally shorted versions are suitable for distribution applications offering 1 input and 3 outputs.

'elmex' Component Housing acts as simple Interface Circuits duly mounted in the Terminal Block itself, saving assembly time, cost of wires and labour in the control cubicle. This avoids inter-connection between simple terminals and the components mounted on a separate PCB in the panel, offering flexibility.

A variety of components like Diode, LED, Resistor, Varistor (MOV) are mounted in Insulation Housing of double deck terminal KUDD 4 as required for the application. They act as simple interface circuits duly mounted in terminal blocks, saving time and labour.

They find application in PLC, DCS, Machine Tools and other Control & Automation panels. The variety of Component Housing for mounting Diode, LED, Resistor, MOV in various combinations are available using the insulation housing of KUDD4N / KU2D4.

'elmex' three level terminal blocks can be used for high-density wiring and for wiring special equipment such as proximity sensors.

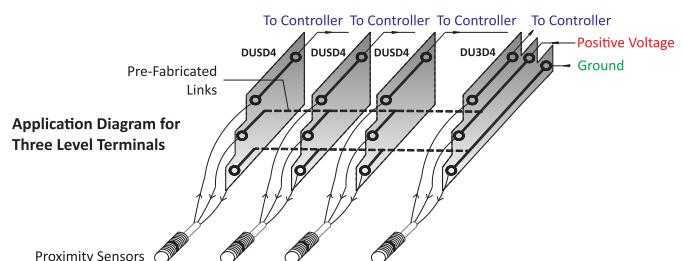

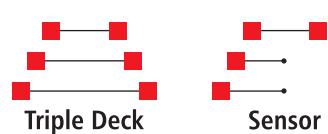

**DUSD4** has special link attached to the middle and lower level to facilitate the interconnection between adjacent terminal blocks **DU3D4** or **DUSD4**. The negative and positive circuits can be easily bridged together and then connected to a power source with DU3D4 terminal.

**DUSD4** can be used along with **DU3D4** to provide a quick and efficient means of wiring sensors. **DUSD4** comes equipped with a bridge on the first and second level that allows it to be immediately connected to an adjacent similar block, thereby connecting positive (+) and negative (-) circuits together without the need for special jumpers. The top level is a feed-through circuit allowing the sensor circuit to be wired directly to the controller.

# SPRING LOADED TERMINALS

Vibrations adversely affect terminal connection, causing loosening of conductors and consequent by over heating of terminal blocks. 'elmex' Terminal Blocks are therefore designed to be inherently resistant to vibrations in normal applications. However, high vibrations can arise due to vibration-affected installation sites, such as installations in and around mines, proximity to heavy machine shop, forging/die casting shops, cement/steel plants machinery, textile machines and so on. Special designs for high vibration application are also preferred in some Power Projects, Power Distribution Centre, Motor Control Centre and Relay Control Panels depending on proximity of vibration generating equipment.

'elmex' Standard Screw Clamp design, with compression springs, provided under the clamp, offers a reliable solution for high vibration applications of Terminal Blocks. These are called 'Spring Loaded' terminal blocks. They are available both with Polyamide 6.6 as well as Melamine Housings in following Types:

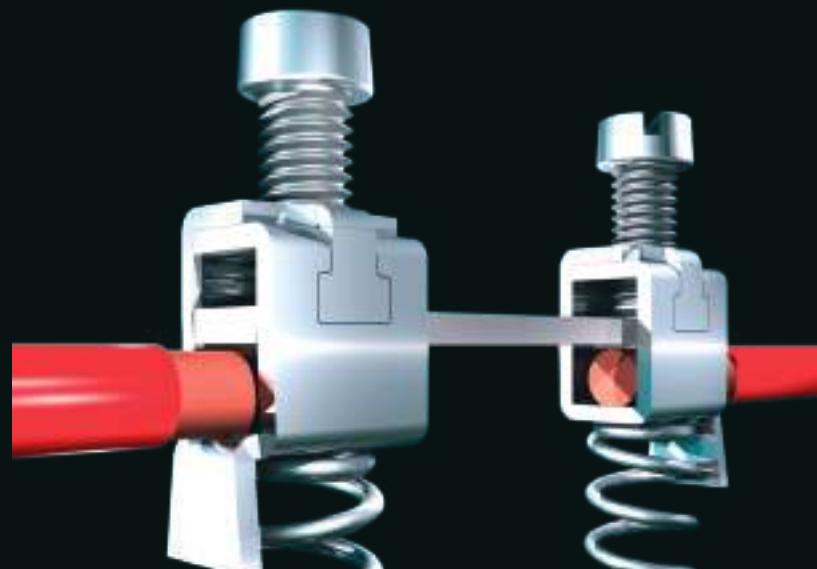

Feed Through Types: KST4UWS, KST6WS, KULT4, KULT6, KULT1, CST2.5WS, CST6WS, CSLT1

Disconnecting Types: KULTD4WS, KULTD6, KUPTD 6S

The spring is assembled under compression, so that it engages firmly with contact clamp. For inserting the conductor, clamping screw should be unscrewed and pressed, which results into pushing down the contact clamp against spring action and creates space for conductor insertion below the current bar. When the screw is tightened with specified tightening torque, the clamping part moves up to cause gripping of conductor with current bar, as with normal clamping process, but in case of the spring loaded design, the conductor is gripped with additional clamping force exerted by the compression spring from below the clamping part.

Special design of current bar with a recess is available to anchor a hook-bladed cable lug, in the current bar. This provision creates conductor locking within terminal block once it is clamped, so that it cannot be pulled out accidentally. This design is presently available in types CSLT1, KULT1, KULT4 and KULT6.

# KUT-N SERIES

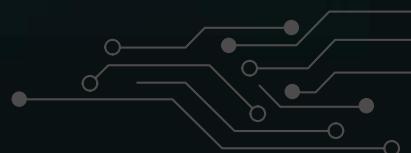

'elmex' KUT-N Series terminal blocks, tested and approved for 1000 V DC suitable for use in photovoltaic systems. These terminal blocks have conductor termination by well proven screw-clamp technology and are manufactured using Polyamide 6.6 insulation housing.

The KUT-N Series currently consists of 2.5, 4, 6, 10 mm<sup>2</sup> terminals (KUT2.5N to KUT10N) all with identical profiles. This feature allows use of common accessories such as End Plate, Barrier Plates, End Clamps etc., for the entire range. The 5 mm (KUT2.5N) and 6 mm (KUT4N) pitch for the terminals are becoming more popular internationally.

The double deck terminal KUDD4N is also available in this range where space is constraint.

All KUT-N series terminals have funnel shaped wire entry hole which guides wire perfectly into the clamp even in difficult and congested places of wiring. This also fully shrouds the conductor termination, thus providing electrical cover for safety.

The marking label windows are specially designed to accept labels of different makes and offer installation flexibility for end users.

ETDD4N is a double deck earthing terminal block corresponding to the ETN series. ETDD4N has two levels of earthing mechanism and the provision of four clamps for the termination of four conductors. Due to this, it enables the high density wiring for earthing application.

# STUD TYPE TERMINALS

While standard Screw-Clamp or Spring Clamp terminal blocks are designed for direct connection of conductors (solid, stranded, flexible), simply after stripping the insulation, there are other wiring practices and applications where conductors have to be provided with ring type or fork type lugs, for more secured connections. '*elmex*' has developed a whole range of Stud type terminal blocks with connection possibility from  $0.5 \text{ mm}^2$  to  $35 \text{ mm}^2$ , which accept ring/fork type lugged cables. These are available both in Polyamide 6.6 and in Melamine Housings.

For Stud Type terminals CAT & KAT, studs have special long nuts, with slot at the top, so that the nuts can be operated using screwdrivers. This facility of using screwdriver is very useful where space-constraints may not allow use of standard spanner for tightening. These nuts also serve as test sockets, in which pins of test wires can be plugged. For stud Type terminals CBT & KBT, standard nuts are provided on the studs (nut driver operated) for securing the lugged conductors. These Stud Type terminal blocks are used with protective transparent covers, which enclose the live parts, as protection against accidental contact. Such covers can be provided for a stack of stud terminals.

These terminal blocks are individually provided with shrouds as a protection cover for safety against shock hazard. These shrouds are hinged type protective covers which are in-built in the terminal blocks and are a default feature in this range of TBs.

Once the wiring is done, these shrouds are to be closed which in turn, makes the whole terminal block assembly finger safe against shock hazards.

Terminals are provided with hinged covers within which the nuts remain captive. When the hinged shrouds with captive nuts are opened, the conductors crimped with insulated ring fork lugs are then terminated in the terminal block. When the covers are closed, the captive nut positions itself on the threaded bolt. The nuts are then tightened with a screw driver, to establish connections. The covers fully shroud the live metal parts and the insulated lug in the conductor clamping area, ensuring safety against electric shock hazard.

Since the nuts are captive in the hinged covers, (i.e. no need to open them up), this type of construction facilitates quick and convenient way of making connections.

'elmex' range of KAT series Terminal Blocks type KAT M3, KAT M4, KAT M5 and KBT series terminal blocks type KBT M4, KBT M5-15, KBT M6 are already used by different users for different applications.

While above listed terminal blocks use stud and hex nut or stud and long round nut as part of terminal assemblies, this range of terminal blocks i.e. KATM3E, KATM4E, KBTM4E, KBTM5E and KBTM6E employ simplified construction for terminal assemblies as a cost effective solution for termination of conductor prepared with ring or fork type lugs.

These terminal blocks have inclined window for fixing marking labels, an advantage for quicker identification.

These terminal blocks can be used with protection covers for safety against electric shock hazards.

# FUSE TERMINALS

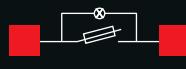

Applications in Control & Automation require fuse protection facility. Elmex offers Terminal Blocks with built-in safety fuse levers. These Terminal Blocks accommodate a glass cartridge fuse of 5mm x 20mm, 5mm x 25mm or 6mm x 32mm size. The fuse holder is made of special grade Phosphor-Bronze and hence offers low contact resistance. A solid brass link type DL4 in place of the fuse, makes it possible to use it as a Disconnecting type Terminal Block.

KUDDF 4 is a Fuse Terminal and a Standard Terminal Block (Feed Through) combined in one housing, giving cost, time and space economy. It occupies the space of one terminal block and works as a pair of Terminal Blocks - the upper tier with Fuse Protection. One Terminal can be assigned to one pair of signals. An LED is provided for blown fuse indication. Standard operating voltages can be selected from a range of 12 VDC, 24 VDC, 48 VDC, 110 VDC, 220 VDC, 110 VAC and 240 VAC.

## LED KIT (For UBDF 4)

Special feature of UBDF 4 is "modular fitment" of LED kits that can be mounted in the hinged lever. These LED kits for different AC and DC voltage ratings are available and can be separately ordered and fixed into the hinged lever. This feature allows users to separately order fuse terminal UBDF4 and LED kits as per actual application.

UBDF4 with fuse blown indication for DC voltage ratings have two LEDs connected back to back in the 'blown fuse indication' circuitry, thus giving flexibility for mounting in either direction on the DIN rail irrespective of voltage polarity.

\*Available Signal Voltage

UBDF4D1 = 24 VDC (27KΩ)

UBDF4D2 = 48 VDC (56 KΩ)

UBDF4D3 = 110 VDC (130 KΩ)

UBDF4D4 = 220 VDC (270 KΩ)

UBDF4D5 = 12 VDC (12 KΩ)

Resistor Value Shown in Brackets

\*\*Available Signal Voltage

UBDF4A1 = 110 VAC (130 KΩ)

UBDF4A2 = 220 VAC (270 KΩ)

# DISCONNECTING TERMINALS

Certain applications in control and measurement circuits necessitate locating operating faults quickly without disconnecting the conductors. 'elmex' offers a range of Disconnecting Type Terminal Blocks which can be used to disconnect the continuity without actually removing the wires.

## KLTD4 / OAT6T / OAT6DTS / KUTSD6 / KUTD10

These Terminal Blocks mainly find applications in secondary Circuit of C.T., Relay Panels etc. A clearly visible Sliding Link is used for disconnection. The link can be moved to one side by unscrewing. The tightening of the screw prevents it from sliding back. The test socket is a standard feature for these terminal blocks.

**KUTSD6** offers feature of shorting to adjacent terminal using an internal removable shorting link useful in SCADA

**KULTD4 / KULTD4WS** These Terminal Blocks find special application in Control & Instrumentation industry. The hinged knife edge lever can be easily pushed open to simulate faulty conditions.

In this type of terminal blocks, the connection and disconnection of the circuit is achieved by operating the lever provided at the top of terminal which houses the metallic knife edge. This lever when closed causes the movement of knife edge in between the two open ends of the current bar, thus completing the circuit and causing the continuity between the two clamps.

These terminal blocks offer quick connection or disconnection of the circuit for maintenance or trouble shooting purpose by just opening of Knife edge. These terminal blocks are mainly employed for C&I and SCADA applications.

Pop-up type of disconnecting terminal blocks employ screw driver operated pop-up stud for connecting and disconnecting circuit. The pop-up disconnecting link does not operate by utilizing the frictional contact and hence has comparatively longer product life. Also, this mechanism enables a very quick connection/disconnection since it eliminates the whole process of screwing and unscrewing the disconnecting link in contrast to Sliding link disconnect terminal blocks.

These terminal blocks come with screw clamp termination and provided with test socket facility for measuring the electrical parameters during the operation. KUPTD6S comes with spring loaded terminal clamps for application in vibration prone areas.

'elmex' test disconnecting terminal blocks are also available in multiway sets offering quick and efficient solution for CT secondary wiring. These sets are available in various combinations with respect to the type of terminal blocks used and the various no. of ways required in line with the application. We also offer to provide the customized solutions for the applications which are not served by the listed products in this category.

# POWER / BUS BAR / HIGH CURRENT TERMINALS

'elmex' offers a wide variety of Power/ Bus-Bar/ High-Current terminals suitable for all types of cables (solid, stranded, with ring type or fork type lug) both in Polyamide 6.6 and Melamine housings.

Power (Bus-bar) type terminal range covers DPBB 50, 70, 120, 185N & 240 and rated upto 415 Amps, for fork/ring type lugs, bolted to the current-bar of the terminal blocks.

## Protection & Safety

For increased creepage distance and safety against accidental contact, barrier plates are to be used along with the Terminal Blocks.

## Finger-Safe Power Terminals

'elmex' offers a new design type SPT in which hinged covers are provided over the cable the points. Cables with fork or ring lugs are connected by nuts to the terminal after lifting hinged covers, which are closed after connection is completed. These are finger safe terminals by design, not requiring covers or barrier plates, for safety/ protection.

Their housing is Polyamide 6.6 and currently available with 35 mm<sup>2</sup> to 300 mm<sup>2</sup> capacity and with rated currents of 140A to 520A.

The above terminal blocks (i.e. DPBB50, DPBB70 and DPBB120) are also available with "Clinch Nut" design. In this modification the current bar has the nuts pre-fitted (clinched) in them. These nuts are not supposed to be removed and hence are circular in design to avoid the engagement of spanner/ nut driver with them. This design brings about the advantage of "Single Hand Operation" wherein the user can terminate the conductor by the use of one hand only as compared to the conventional design which requires the use of other hand also, for holding the nut. This makes the termination of conductors much easier and faster, esp. in situation of high wiring density and constrained access to the Terminal Block. The ordering code for these Power terminals are DPBB50-CN, DPBB70-CN and DPBB120-CN respectively.

**Finger - Safe Power Terminals**

'elmex' offers a new design type SPT in which hinged covers are provided over the cable termination points. Cables with fork or ring lugs are connected by nuts to the terminal after lifting hinged covers, which are closed after connection is completed. These are finger safe terminals by design, not requiring covers or barrier plates, for safety / protection.

Their housing is Polyamide 6.6 and currently available with 35 sq mm to 300 sq mm connection capacity and with rated currents of up to 520 A.

'elmex' PAT Series of Terminal Blocks offer termination solution for high current applications.

They are Panel / Surface mounted and thus eliminate the use of standard DIN Rails, which is otherwise required for Terminal Blocks.

They are stackable by design and hence can be stacked as per the no. of connections required as per the application.

They employ insulation housing made of glass filled engineering thermoplastic having very good thermal properties.

Termination is by prepared conductor with ring type lugs and connection is secured by terminal assembly comprising nut and bolt, which gives highly reliable termination.

These are available for rated conductor size ranging from 10 sq mm to 95 sq mm and offer connection possibility ranging from conductor size 4 sq mm to 95 sq mm.

# DISTRIBUTION BLOCKS

'elmex' Distribution Blocks are an Innovative Engineering Solution to satisfy customer need. They find application in Power Distribution for Control Circuits and can also be used to centralize earthing for the entire Panel. These Terminal Blocks are completely shrouded and accommodate single input and multiple outputs. They replace conventional open Bus Bars, ensuring perfect continuity.

Two varieties of Distribution Blocks are available - one is suitable for identical size of conductors as input/ output, and another for higher conductor size as input and lower conductor size as output.

FDBK extends the same advantages and features of DBK Distribution Blocks. These blocks are suitable for Control applications.

Certain application require distribution of high current from one circuit to multiple loads. 'elmex' Terminal Blocks type DTB35-10 and DTB35-10x4 provide a solution to such requirements. The Terminal Blocks are constructed for termination of Input conductor of 35 sq mm carrying high current by conventional screw clamp technology. The input high current can be tapped from 3 clamping units (DTB35-10) or 4 clamping unit (DTB35-10x4).

A thermocouple is a bi-metallic junction i.e. a junction between two different metals that produce a voltage related to temperature difference. Thermocouples are classified depending on different alloys used for different temperature ranges. Some of the thermocouple types are as under.

- \* 'K' Type: Chromel (Ni/Cr) Alumel (Ni/Al)
- \* 'J' Type: Iron (Fe) Constantan (Cu/Ni)
- \* 'T' Type: Copper (Cu) Constantan (Cu/Ni)
- \* 'E' Type: Chromel (Ni/Cr) Constantan (Cu/Ni)

For temperature measuring requirement, wherein measuring point is far from the measuring instrument, intermediate connections have to be made for extending the path. For such application conventional type terminal blocks cannot be used to create the required extension, since current carrying parts are made of either copper or copper alloy which are different than the thermocouple metals or alloys as mentioned above.

Thermocouple terminal blocks are constructed using the same type of metal/alloy as that of thermocouple intended for measuring temperature. Thermocouple terminal blocks are used in pairs.

Figure - Showing a Typical Thermocouple Terminal Block Application

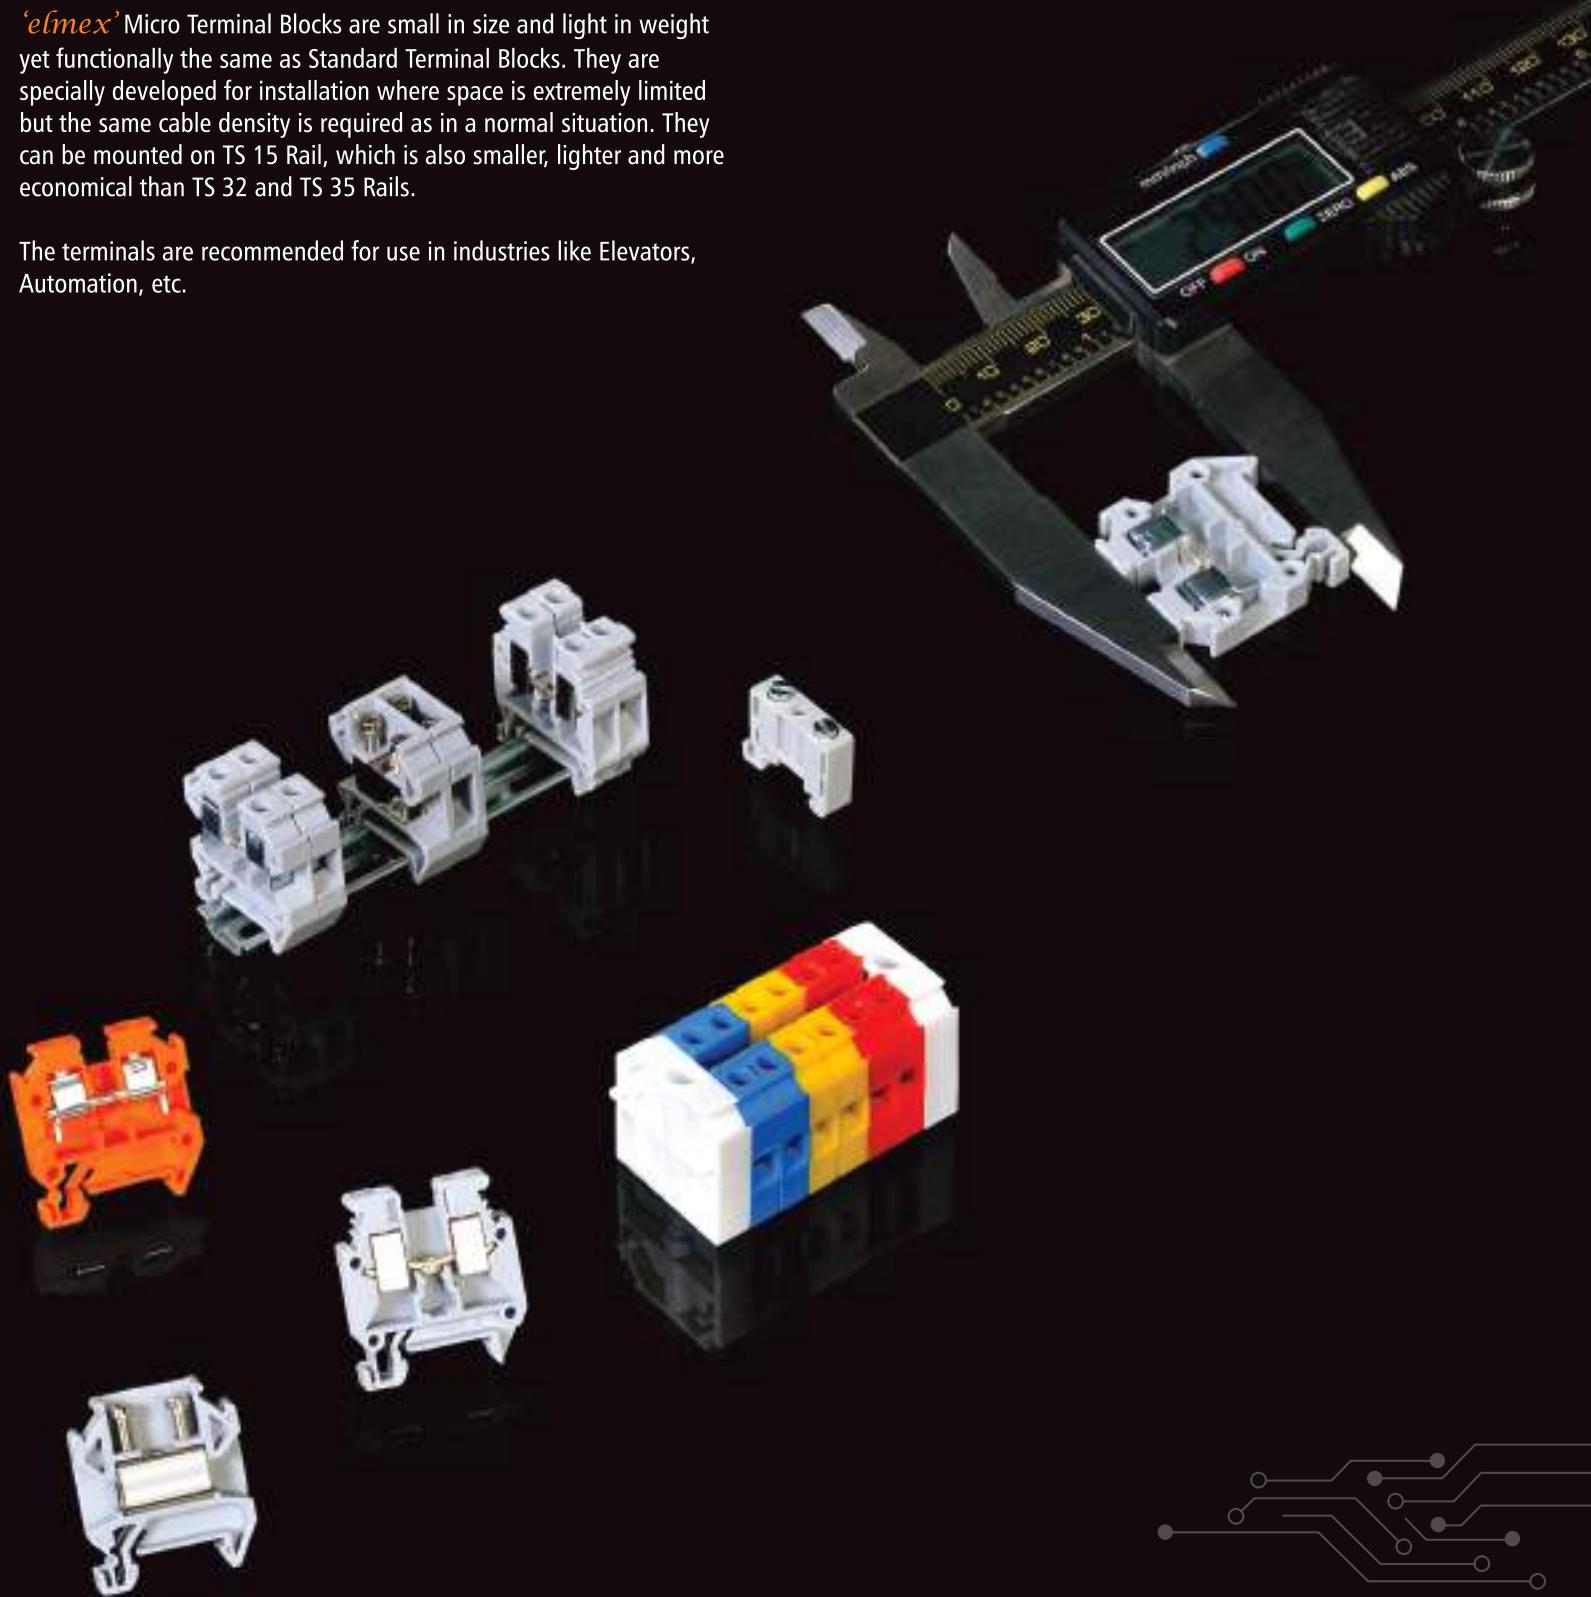

# MICRO TERMINALS

'elmex' Micro Terminal Blocks are small in size and light in weight yet functionally the same as Standard Terminal Blocks. They are specially developed for installation where space is extremely limited but the same cable density is required as in a normal situation. They can be mounted on TS 15 Rail, which is also smaller, lighter and more economical than TS 32 and TS 35 Rails.

The terminals are recommended for use in industries like Elevators, Automation, etc.

'elmex' terminal blocks type PET4, PBTM3 and PBTM4 are Micro Terminal Block constructed for surface mounting thereby eliminating use of standard Din Rails which are otherwise required for mounting terminal blocks.

These terminal blocks are compact in size and facilitate connection possibilities ranging from conductor size 0.2 sq mm to 4 sq mm depending on the model.

Termination in PET4 is by screw clamp technology and termination in PBTM3 and PBTM4 is by screw tightened overthreaded insert.

These terminal blocks are constructed using insulation housing made of engineering thermoplastic PA66 having good mechanical, electrical and thermal properties.

# SPRING CLAMP TERMINALS

'elmex' offers a wide range of Screwless terminal blocks for various applications prevalent in the Electrical and Automation Industry. As the name suggests this type of terminal blocks do not have a screw for termination of a conductor within the clamping unit. The clamping unit consists of a spring clamp made from a special grade spring steel material which is heat treated for stress relief and can be operated by a screwdriver for termination of the conductors.

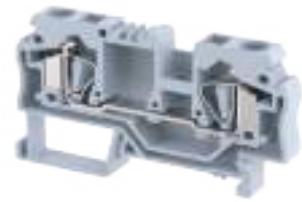

Some of the salient features of screwless type of terminal blocks are as below:

- 1) **Increase in wiring efficiency and speed:** In screw-clamp type terminal blocks, it is required to open up screws and tighten them up after conductor insertion. However in screwless type terminal blocks, conductor is inserted after opening the clamp with a screw driver which is just to be withdrawn after inserting the conductor and the termination is secured with spring action force of spring clamp. This results in saving a lot of time (typically 65%) during the wiring of screwless terminal blocks as compared to screw type terminal block
- 2) **Torque application for termination not required:** Since the termination is by spring force action and without a screw, this eliminates the process of setting and applying the specified torque as required for the screw type terminal blocks
- 3) **Ease of using unprepared conductors:** These terminal blocks are so designed that they do not require conductor preparation i.e. one just needs to strip the conductor for the specified stripping length and insert it into the clamp i.e. no need to prepare conductor with a ring or fork or pin type lug by additional operation of crimping which if not done carefully can result in unreliable joint. This also saves cost of the lugs and the labour used for crimping the lugs to wire along with saving the time on this front
- 4) These terminals i.e. terminals of the same type, can be interconnected by using only 2 way push in type shorting links, in required numbers. Current bars in these terminal blocks have provision to accept two shoring links which can be inserted from the top side depending upon construction of the terminal blocks. Thus we can short two terminal with one shorting link, three terminal with two shorting links, four terminals with three shorting links and so on.

Also these terminals are tested with unprepared conductors for all the type tests as per standard IEC 60947-7-1. The conductors used are both, flexible and rigid.

Certain application require distribution of high current from one circuit to multiple loads. 'elmex' Terminal Blocks type DTB35-10 and DTB35-10x4 provide a solution to such requirements. The Terminal Blocks are constructed for termination of Input conductor of 35 sq mm carrying high current by conventional screw clamp technology. The input high current can be tapped from 3 clamping units (DTB35-10) or 4 clamping unit (DTB35-10x4).

These Terminal Blocks are so constructed that they offer efficiency & convenience in wiring provision of Spring Clamp on one side and Plug In connection on the other side. Spring Clamps facilitate conductor termination simply by opening up Spring Clamp with a screw driver without having to apply torque as required in Screw Clamp Termination.

Similarly Plug in connection eliminates conductor preparation during wiring as this can be done in advance for separate plug. The pre wired plug is connected to the main terminal block.

Pluggable connection facilitates quick disconnection also for maintenance or troubleshooting purposes.

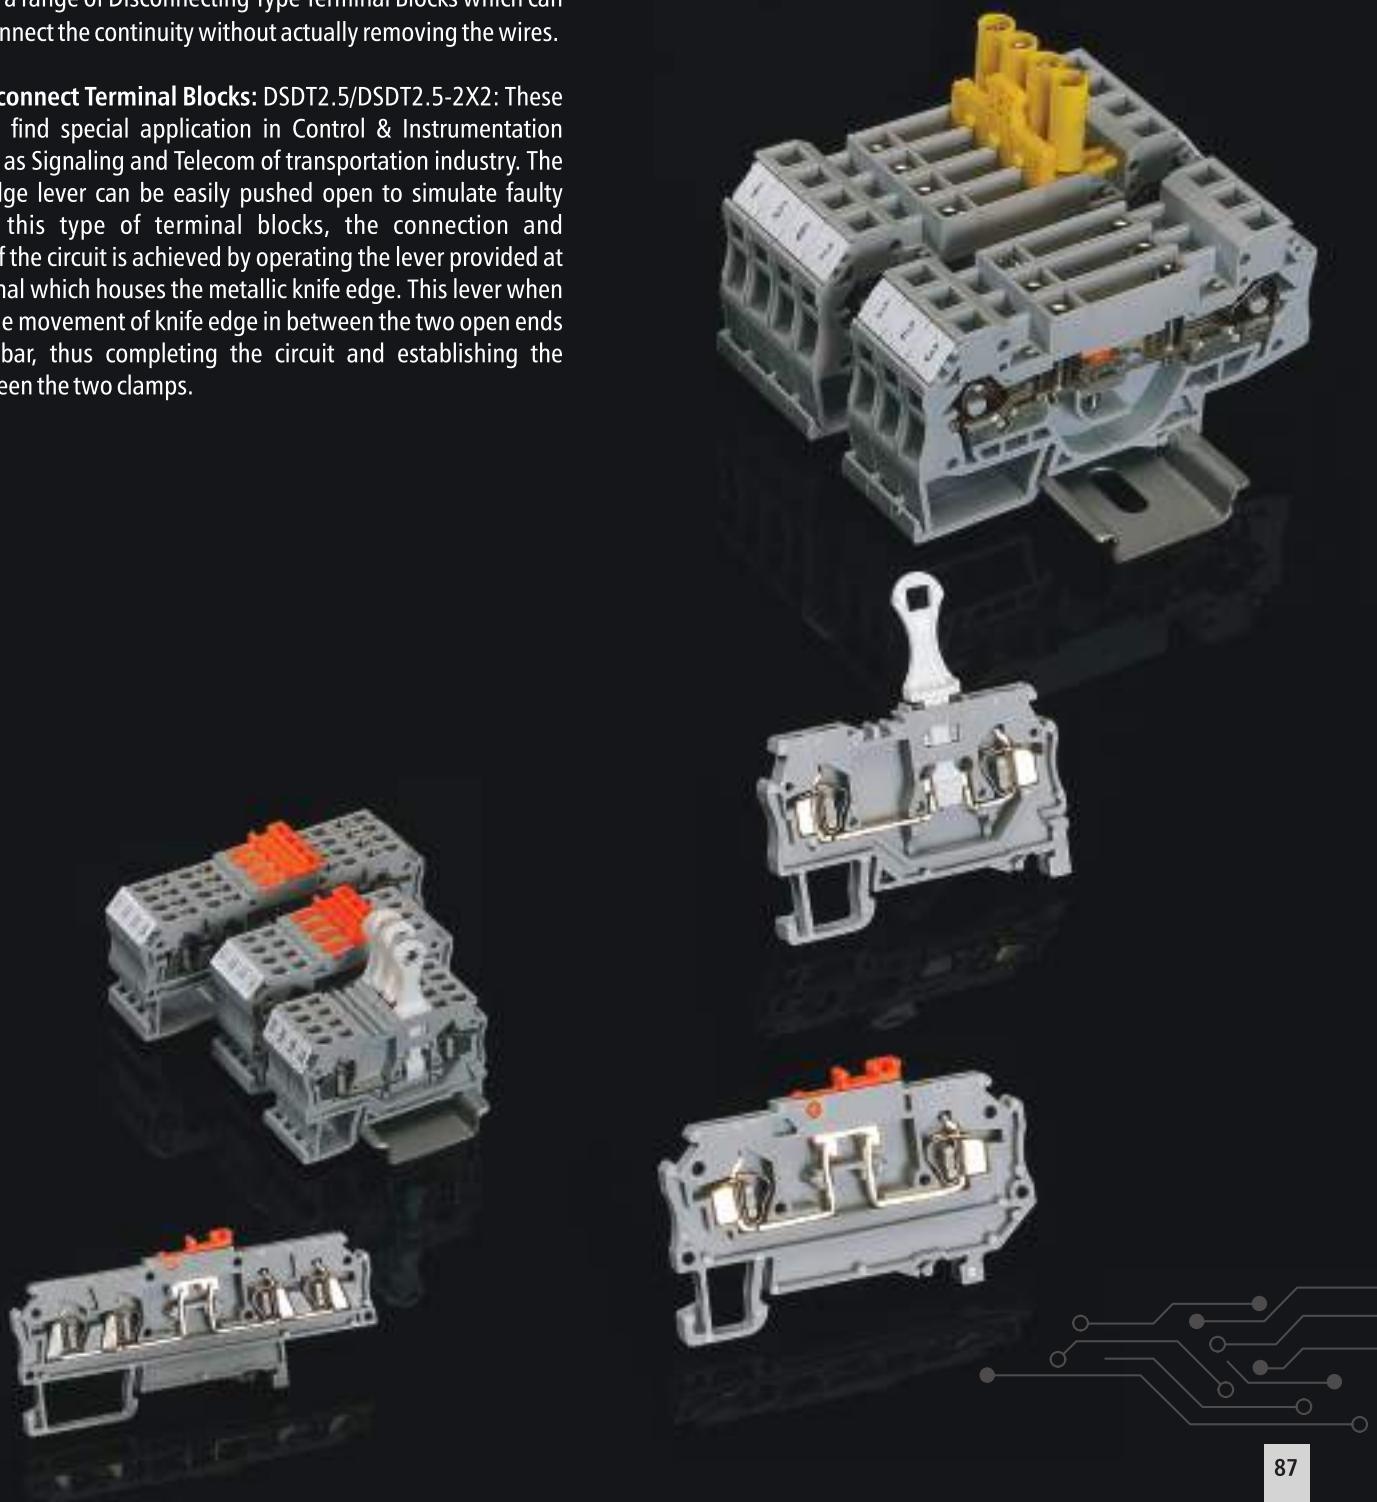

# SPRING CLAMP DISCONNECTING TERMINALS

Certain applications in control and measurement circuits necessitate locating operating faults quickly without disconnecting the conductors. 'elmex' offers a range of Disconnecting Type Terminal Blocks which can be used to disconnect the continuity without actually removing the wires.

**Knife Edge Disconnect Terminal Blocks:** DS DT2.5/DS DT2.5-2X2: These Terminal Blocks find special application in Control & Instrumentation industry as well as Signaling and Telecom of transportation industry. The hinged knife edge lever can be easily pushed open to simulate faulty conditions. In this type of terminal blocks, the connection and disconnection of the circuit is achieved by operating the lever provided at the top of terminal which houses the metallic knife edge. This lever when closed causes the movement of knife edge in between the two open ends of the current bar, thus completing the circuit and establishing the continuity between the two clamps.

DSET6 (GR-Y)		

DSET series of Terminal Blocks corresponds to the Screwless Terminal Blocks series type DST and these are Earth Terminal Blocks used for earthing. Terminal Block construction is such that the Terminal Foot establishes direct mechanical and also electrical contact with the DIN Rail. In applications these Earth Terminal Blocks are mounted on same DIN Rail on which other Terminal Blocks are mounted.

Spring Clamp construction offers wiring efficiency. Terminal foot is made up of high conductive copper alloy with Tin plating and provides low resistance path for earthing. These Terminal Blocks are available in green - yellow colour combination.

**'elmex'** Plug and Socket terminal block type DPSC5.08, DPSC7.50 and PS8M offer innovative solution for wiring and interconnecting electrical circuits.

These terminal blocks are provided with integrated snap fit locking arrangement and are available with fixing flange for surface / panel mount applications. Terminal blocks without flange are also available for 'wire to wire' (hanging type) connections. These terminal blocks are suitable for applications in semi-draw out type motor control circuits / feeders and for inter-panel wiring. The connection between plug & socket parts of the terminal is established by contact mechanism employing spring action that provides permanent high contact pressure with very low resistance to securely connect the plug pin with the socket.

They are available in following no. ways (i.e. provision for connection of independent circuits):

- DPSC5.08:** 2,3,4,5,6,7,8,9,10,12 & 20 way
- DPSC7.50:** 2,4,6 & 8 way
- PS8M:** 2,3,4,5,6,7,8,9,10,11 & 12 way

**'elmex'** range of Neutral Link **KNL4**, **KNL16** and **KNL35** are suitable for termination of neutral and ground wires on bus bar. They are available for termination of rated conductor size 6, 16 and 35 sq mm respectively.

**'elmex'** Neutral Links basically comprise of four parts i.e. terminal clamp, contact holding piece, terminal screw and the insulation housing made of Polyamide 6.6. These neutral links are mounted on the bus bar. Bus bars needed for termination are available in standard length of 1 meter which can be cut to required length at the customer's end. Further, bus bars are available in rectangular cross sections of 10 x 3 sq mm as well as square cross sections of 6x6 sq mm and both of these selection are common for use with all three types of links.

For mounting on DIN rail, '[elmex](#)' side clamp type **SCNL** is to be used. It is suitable for mounting on **TS 35 / TH 35** type DIN rails and is designed for accommodating both types of bus bar. The side clamp is designed in such a way that two bus bars with neutral links can be fixed at staggered height offering more flexibility in termination.

For surface mount applications, plastic support '**elnex**' type **KNLSUP** can be used. Support **KNLSUP** is designed for mounting both size of bus bars.

## Surface Mounted

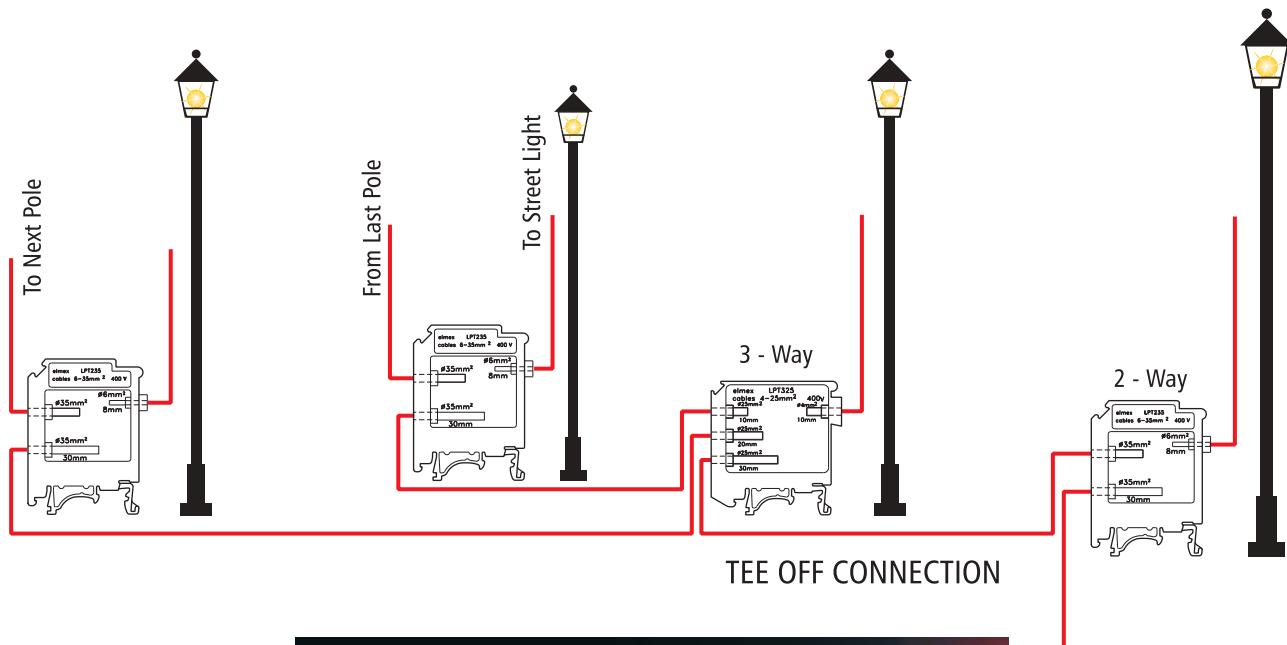

## DIN Rail Mounted

# LIGHTING POLE TERMINALS

'elmex' Lighting Pole Terminals offer safe and reliable Termination Solutions for **Street Light Wiring** requirements. The special construction of Lighting Pole Terminals ensures minimum junctions unlike contemporary Terminal Blocks, thus making them suitable for long distance wiring without much heat generation and minimum voltage drop. A solid Copper Alloy Piece functions as Current Carrying part and Wire Clamping unit.

Lighting Pole Terminals come in two varieties - one with two inputs and one output and the other with three inputs and one output. The first variety is suitable for continuous wiring across the length of streets. The second variety offers a facility for taking a 'T' junction as an additional feature. The 'elmex' range includes Lighting Pole Terminals suitable for 25 sq mm & 35 sq mm wires. 'elmex' offers Allen Key operated or Screw Driver operated terminals.

'elmex' "C" Series (TS32mm) DIN Rail Mounted Feed Through Terminals in Melamine Housing offers the complete range suitable for all control and power applications.

The power screw - clamp design offers high contact force and is easy to use.

The range covers terminals for conductor size from 0.5 sq mm to 185 sq mm

This special TS32mm Rail Mounted Melamine Terminal facilitates quick connections and disconnections between the machine and the control panel and is also suitable for semi draw-out type machine control centres. A screw driver operated knob provided on the top provides the required locking and detachment facilities between the plug and socket.

Screw connections fitted with leaf springs for the incoming and outgoing conductors are provided to obviate pinching of the conductors. An additional non-relaxing spring which carries no electrical loads ensures a permanent high contact pressure with low contact resistance.

**'elmex'** "C" Series (TS32mm) DIN Rail Mounted Stud Type Terminals in Melamine Housing are specifically developed for termination using Ring / Fork Type Lugs and provided a very reliable connection against vibration.

They are available in two types:

- Screw driver operated
- Nut driver operated

The range covers terminals for conductor sizes from 0.5 sq mm to 35 sq mm.

All the metal parts used are of brass (copper alloy) which make them suitable for use in applications like switch boards, switch yards, marshalling racks etc., generally exposed to environmental extremities.

Transparent protective covers are used for shrouding live parts in the terminals.

\*Suitable for 1100V AC applications.

'elmex' Bus Bar Terminals offer a solution to termination needs for higher size wires / high current applications. The open design of the terminals facilitates the connection of a Fork Type or Ring Type Lug - a very essential part of Bus Bar wiring.

Terminals for terminating 35 sq mm to 120 sq mm cables are available in this range.

Partition / Barrier Plates are used for increased Creepage Distance between adjacent terminals. Slots are provided in the Barrier Plates to facilitate the mounting of Transparent Protective Cover shrouding the live parts.

In **CBT170T**, **CBT250T** and **CBT300 T** the current bar holes are tapped and the nuts are slotted for screw driver operation. This eases the fixing of wires where there is space constraint.

Certain applications in control and measurement circuits necessitate locating operating faults quickly without disconnecting the conductors. **'elmex'** offers a range of Disconnecting Type Terminal Blocks which can be used to disconnect the continuity without actually removing the wires.

These Terminal Blocks mainly find applications in secondary Circuit of C.T., Relay Panels etc. A clearly visible Sliding Link is used for disconnection. The link can be moved to one side by unscrewing. The tightening of the screw prevents it from sliding back. The 4 mm diameter nut assembly can be used as test sockets.

## ACCESSORIES

Selecting proper Accessories and using them correctly during assembly of Terminal Blocks is a very important function on the part of assembly-designers and assemblers of terminals blocks. These accessories are specially designed by 'elmex' to perform one or more of the following functions, which ultimately help the user to derive optimum benefit from use of 'elmex' terminals.

**END PLATE:** For insulating end-of-stack terminals and for assembly of terminals of different sizes.

**BARRIER PLATE:** For increased values of clearance and creepage if required in specific applications / (standard designs already provide more than necessary values as per IEC 60947-7-1) and also for visible segregation of groups of terminals.

**END CLAMP:** For holding the stack of terminal blocks together, along the length of mounting rails.

**SHORTING LINK:** For inter connecting the terminals, use of factory-made terminal-shorting-links, rather than using inefficient

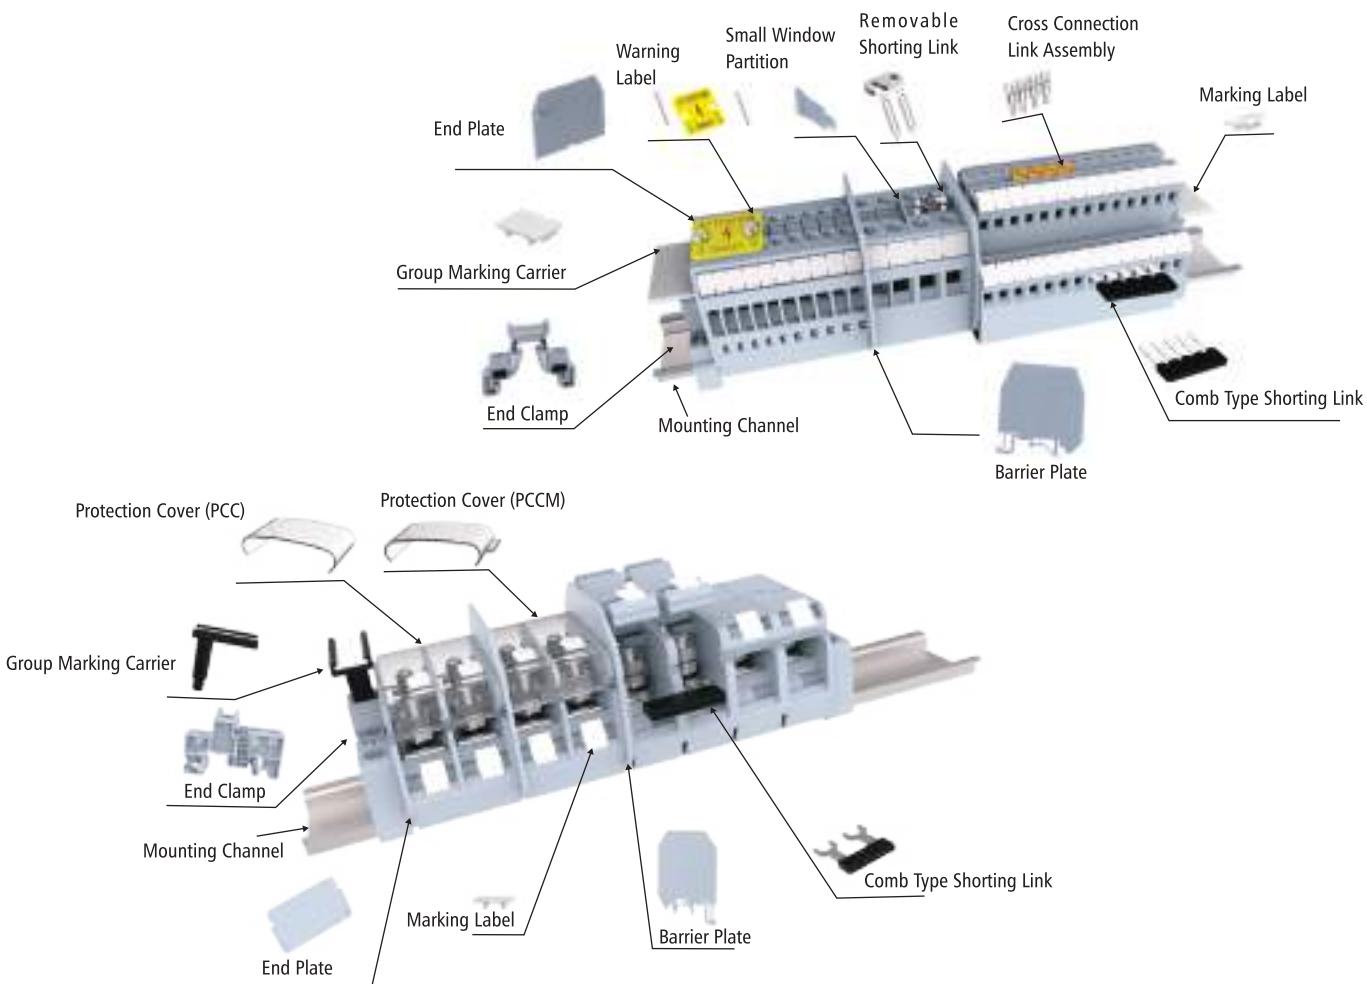

and unreliable wire looping or adding extra terminals, for the purpose of inter connections.

**PROTECTIVE COVER:** For making entire stack of terminal blocks 'finger safe', as preferred in some applications.

**GROUP MARKER:** For identification of individual terminals and for group-identification.

Naturally, use of accessories is first to be conceived by the assembly-designer of terminal blocks. Certain accessories such as End plates and End Clamps are mandatory. It is therefore as important to select proper accessories as to select terminal blocks, so that installation, maintenance and fault-tracing are all simplified at the design stage itself.

Necessary guidance for selection of accessories available for all the types of terminal blocks, is given in following pages. The data on accessories for individual Terminals is provided with each terminal in the previous pages.

## ACCESSORIES - END PLATES

**'elmex'** End Plates are mainly used to cover the last Terminal Block to insulate the live metal components. They are available for all type of Terminal Blocks in standard and non standard colours.

**'elmex'** Barriers Plates are used to isolate adjacent terminals electrically, so as to maintain the required creepage and clearance value. Apart from this function they are also used for identification and segregation of terminal groups.

UHDD

Protection cover type PCK rest on UHDD and it shrouds the entire row of terminals which are mounted on a single DIN Rail making the stack completely finger safe.

## PROTECTIVE COVERS

**PCST**

**PCP**

**PCC 3**

**PCD 3**

**PCCM & PCDM**

Protective Transparent Covers are used for protection against dust.

'elmex' offers protective transparent covers in PVC material which are directly fitted on the Terminal Blocks with Nylon Screws. This cover is also available in cut-length apart from standard length of 300 mm for standard feed through terminal type CST2.5, CST6, CST10, CUT4, CUT6 and CUT10.

Protective Transparent Covers are used to cover the live parts where the contacts of the terminals do not form fully shrouded assemblies.

'elmex' offers Protective Transparent Covers in PVC material for Power (Bus Bar) Melamine Terminals which are directly fitted on the Barrier Plates with the help of adaptor to be fitted in the Terminal Block. These covers are available for individual Terminal Block only.

Protective Transparent Covers are used to cover the live parts where the contact of the terminals do not form fully shrouded assemblies apart from providing protection against dust.

'elmex' offers protective transparent covers in PVC material which are directly fitted on the terminal assemblies of all Stud Type Terminals. These covers are available in Cut-Length apart from standard length of 300 mm.

Protective Transparent Covers are used to cover the live parts where the contact of the terminals do not form fully shrouded assemblies apart from providing protection against dust.

'elmex' offers protective transparent covers in PVC material which are directly fitted on the terminal assemblies of CATDM4, CLTDM4 & KLTD4. These covers are available in Cut-Length apart from standard length of 300 mm.

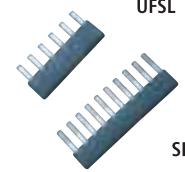

'elmex' also offers the Protective Covers in moulded Polycarbonate material which can cover 2/3 Stud Type Terminals. A notch is provided on the Covers for the ease of mounting and removal from terminals.

## INTER - CONNECTING ACCESSORIES

The Function of shorting link is to interconnect two or more Terminal Blocks of the same type as the same potential. For each Terminal Block, with reference to its cross section and thickness, different types of shorting links are available. All the links are made-up of Brass with 5-7 Micron Nickel Plating and are available for 2 to 10 way connections.

<b>Cross Connection Link Assembly</b>  <b>CCLA</b>	<b>Removable Shorting Links - Studs</b>  <b>RSL</b> <b>LSR</b>	<b>Comb Type Shorting Links</b>  <b>UFSL</b> <b>SLC</b>	<b>Fixed Bridge Bars</b>  <b>SLU</b>
<p>Cross connection Link Assembly is a composite structure of Shorting Link, Screws, Spring washer and sleeves to short the Terminals permanently. These Links are advantageous for handling and time saving as the links come in ready to use for quick cross connection.</p>			<p>Removable Shorting Links are used for interconnecting the two adjacent Terminals temporarily i.e. for switchable cross connection. The links are fitted onto the Terminal Blocks with the help of Long Studs and screws. The links rest above the top surface of Terminal Block so that switching operation becomes easy.</p> <p>Comb Type Shorting Links are used for the Terminal Blocks which do not have the facility for getting interconnected with conventional shorting links. These links are insulated making them shock-proof.</p> <p>This type of shoring link is suitable for U Series Terminal Block. The adjacent Terminal Blocks are shorted with the help of screws. The heads of the screws are covered with insulating collar to avoid accidental contact. Link for Micro Terminal Type: CET 4N and NET 4 are also of the same construction.</p>

## ACCESSORIES - END CLAMPS / MOUNTING RAILS

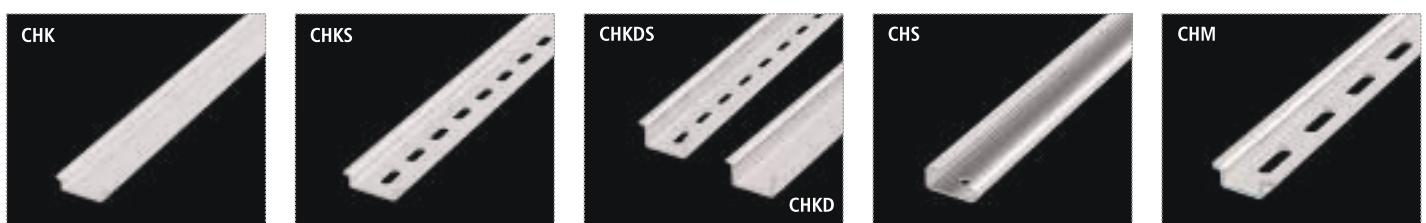

**END CLAMPS:** Also referred to as End Stoppers. Various types of End Clamps are available to suit different channels. End Clamps can also be used as "Spacers" to increase creepage distance between two terminals. End Clamps are available in metallic and Polyamide 6.6.

TYPE	SUITABLE FOR CHANNEL	TYPE
SCS	CHS (TS32)	11 mm
SCSN	CHS (TS32)	8.4 mm
SCKN	CHK (TS35)	8 mm
SCUN	CHS (TS32) / CHK (TS35)	9.5 mm
SCUDD	CHS (TS32) / CHK (TS35)	10 mm

TYPE	SUITABLE FOR CHANNEL	TYPE
SCUSL	CHS (TS32) / CHK (TS35)	8 mm
DCKN / DCKN10	CHK (TS35)	6 mm / 10 mm
SCMN	CHM (TS15)	7.5 mm
SCEC35	CHS (TS32)	8 mm
SCUP	CHS (TS32) / CHK (TS35)	9 mm

**MOUNTING RAILS:** The design complies with international standards, IEC 60715 DIN Standard, DIN EN 50035 for CHS, DIN EN 50022 for CHK, CHKS and DIN EN 50045 for CHM. Additionally gauging is done in-house on every 'elmex' channel to provide dimensional accuracy within restricted tolerances. All channels are Alkaline Zinc Plated with Blue/Yellow Passivation to increase resistance to corrosion. The channels of 300 mm, 500 mm and 1000 mm lengths (with or without slots) are available as Standard Channels. 'elmex' also provides Cut Length Channels as per the customer's design specifications.

## ACCESSORIES - MARKERS, GROUP MARKERS & WARNING LABELS

### 'elmex' Marking Labels

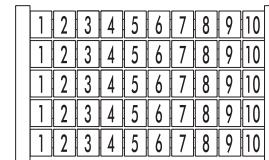

They are used for identification of circuit connections. Marking of the Terminals help in easy identification and quick maintenance. Marking Labels are made of Polyamide in white colour and pre-printed with black indelible ink. Printing upto 3 digits / combination of Alphanumeric is possible.

#### Snap-on Type Marking Label Strip

This marking system consists of ten individual marking labels in a strip. The Strip can be snapped onto ten terminal blocks together or can be broken at any point for individual marking.

#### Snap-on Type Marking Label Card

Snap-on Type Marking Label card consists of 50 Markers, 5 Strips, each consisting of 10 Labels.

#### Group Marking Holders

Group Marking Holders are used to separate and identify a stack of terminal blocks. They are Universal Rail Mounted. A thick paper strip is inserted into the groove on the holder and a transparent PVC strip protects the marked text on the paper.

**GMH 10** - 10 mm thickness  
**GMH 20** - 20 mm thickness

#### Group Marking Carriers

Group Marking Carriers cater to the need of identifying different groups of terminal blocks.

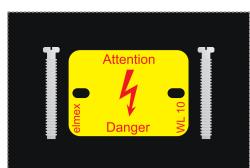

**SCUN MLH** - A Marking Label Holder is fixed on Universal Rail Mounted Side Clamp Type: SCUN. This facilitates the Group Marking of the Terminals mounted on either on channel type TS32 or TS35. A thick paper strip is inserted into the groove on holder and transparent PVC strip protects the writing on the paper.

**SCKN MLH** - A White Marker with larger writing area is snapped onto the groove of TS35 Rail Mounted Side Clamp Type: SCKN.

**GMC** - It is made of transparent PVC, mounted at any end of the Terminal Block stack with the help of Side Clamp. It is suitable for TS 32 Rail.

**DCKN MLH** -It consists of a Marking Lable Holder fixed on the end clamp type DCKN, which is screwless in design. This can be mounted on DIN35 type Top Hat channels. The height of the marking lable holders is adjustable and incorporates a thick white paper strip protected by a transparent PVC Cover.

#### Warning Labels

Warning Label (Attention or Danger Plate) are available in yellow colour with Red Printing for Mounting on the Group of Four standard Type Terminal Blocks.

#### Mounting Base

Mounting Base type **MBCHK** is used to make components DIN Rail Mounted. It contains a tapped hole to enable the fixing of components on to a DIN Rail.

## NEXT GENERATION TERMINALS

'elmex' introduces new range of Push-in type, Spring Clamp type and Screw Clamp type terminal blocks with robust design, manufactured for highest level of electrical and mechanical performance for a wide range of applications.

Connect to the Future of Wire Termination

**ARA**  
Push-In Technology

**AURIGA**  
Spring Clamp Technology

**AQUILA**  
Screw Clamp Technology

### Salient Features

- Uniform design with harmonized features across all the three series
- Compact in design for better space utilization
- Common accessories such as jumpers, end plates and marking labels facilitate low inventory
- Rated for 1000V
- Provision for interconnection between terminal block with different functions
- Improved wire entry with or without lugs
- Possibility of interconnection between terminal blocks having different rated conductor sizes
- Wider marking labels for better visibility

### Applications

Disconnecting  
Terminals

Multi level  
Terminals

Earth (Grounding)  
Terminals

Fuse  
Terminals

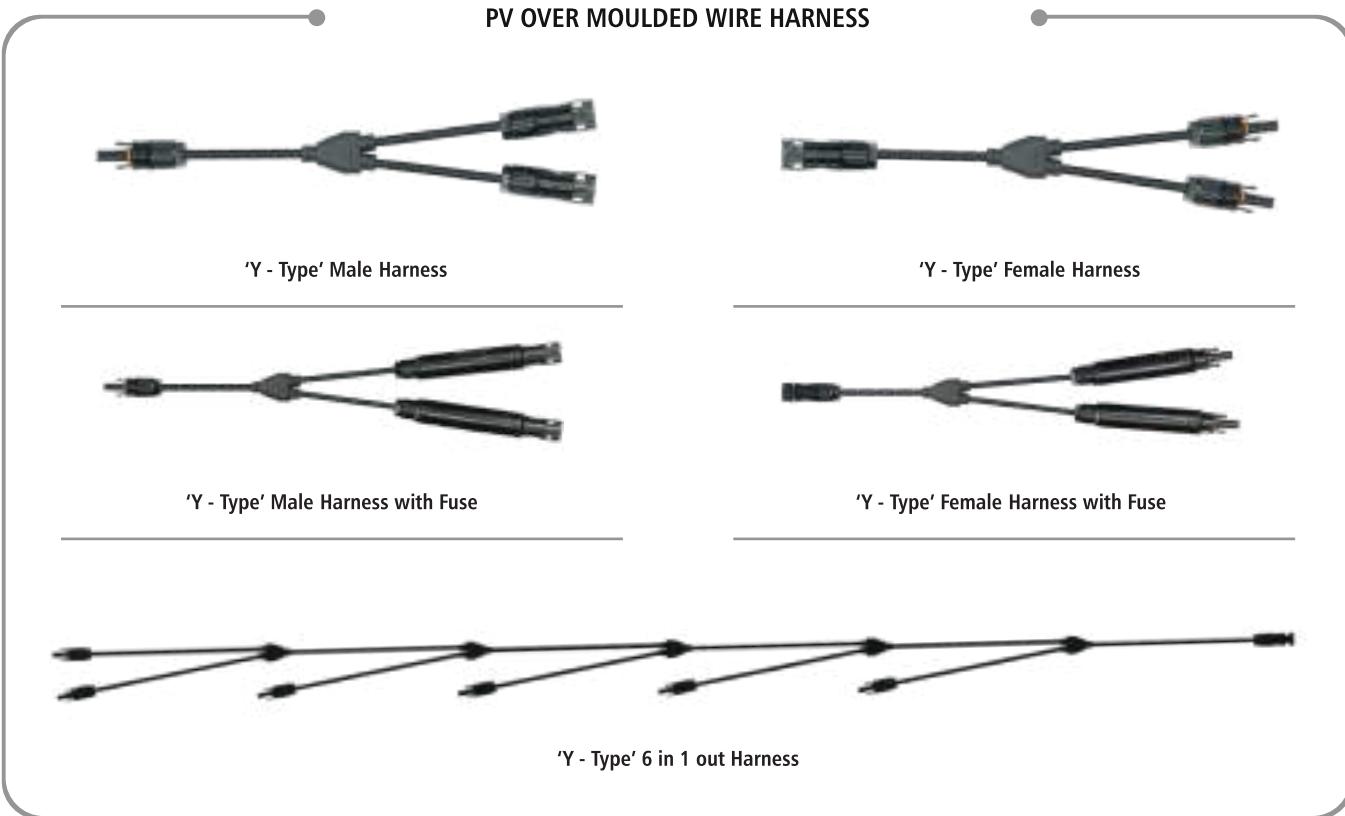

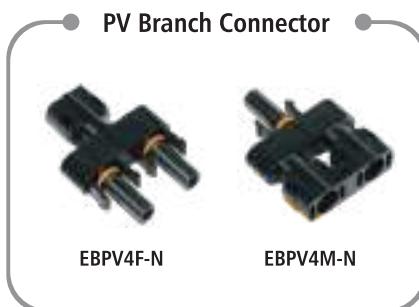

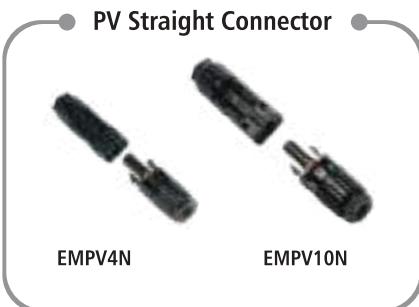

Feed Through  
Terminals

Multiple Output  
Terminals

'elmex' make DC MCBS are confirming to IEC 60947-2

## LOW VOLTAGE CURRENT TRANSFORMERS

'elmex' has been serving electrical industry and providing termination solutions for last five and half decades. In an endeavour to serve a large segment of this industry, 'elmex' proudly adds Polycarbonate Encapsulated Current Transformers to the existing range of products. These Current Transformers are designed and manufactured in compliance with latest standards specifications IS:16227 / 2705 & IEC:61869-2

### GENERAL SPECIFICATIONS

Highest System Voltage: 720V, 50 / 60 Hz.	Insulation Class: E (Offered B or F on request)
Basic Insulation Level: 0.72 / 4.0 kV	Connections: (S1-S2) Two brass terminals of M5 Size
Rated Primary Current: 1 A to 7500 A	Applicable Standard: IEC - 61869 / IS - 16227
Rated Secondary Current: 5 A or 1 A	Standard Burden: 1.25,2.5,3.75,5,7.5,10,15,20,30,40,60 VA
Storage Temperature : -40°C to +90°C	Instrument Security Factor: 5 or 10
Average Ambient: -20°C to +45°C	Dynamic Current (Idyn.): 2.5 x Ith.
Short - Time Thermal Current (Ith): 40xIn for Wound Type CT and 60xIn for Window Type CT.	

### CLASS OF ACCURACY

0.2S, 0.5S for Tariff (Revenue)	3.0, 5.0 for Indication Purpose
0.2, 0.5 for Precise Measurement	1.0 for General Metering
5P / 10P for Protection and PS / PX for Special Purpose Protection	

Also available full range of Resin Cast & Tape Wound Type CTs

Product conforms to IEC:61869-2 & IS:2705

Advantages of 'elmex' Polycarbonate Encapsulated CTs

- Superior Aesthetics and Consistency of Dimensions
- Multiple Conductor Compatibility: Suitable for different size of Bus bars / conductors in the same CT
- Multiple Mounting Options: Suitable for Bus Bar Mounting as well as Panel Mounting
- Fire Retardant
- Embossed terminal Markings: Eliminates the risk of marking stickers peeling off
- Robust Construction: High Mechanical strength resulting in increased safety during transit
- Finger Safe Operation for Secondary Terminal Connection with IP20
- Pin type lug up to 4 sq mm feasibility
- Option of Terminal sealing: Provides protection from power theft
- Manufactured with State-of-Art processes complying to ISO:14001
- Ease of traceability
- Type Tested as per IEC:61869-2
- CE Marked
- RoHS Compliant

Certificate and Approvals

## DIN RAIL MOUNTED INTERFACE MODULES

1 CHANGEOVER

### SPECIFICATION

<b>Relay Make:</b>	FUJITSU / OMRON or Equivalent
<b>Coil Voltage:</b>	DC: 12 V, 24 V, 48 V AC: 24 V, 110 V, 220 V
<b>Contact Rating:</b>	<b>Voltage:</b> 230 VAC / 30 VDC <b>Current:</b> 10 Amp
<b>Fuse Cartridge Size:</b>	5 X 20

Channel	Type
1	3R122
2	3R123
4	3R124
8	3R126
16	3R247

#### Design Options:

- Without Socket / With Socket
- Without / With Fuse at Pole
- Without Loop / Negative Loop / Positive Loop

2 CHANGEOVER

### SPECIFICATION

<b>Relay Make:</b>	FUJITSU / OMRON or Equivalent
<b>Coil Voltage:</b>	DC: 12 V, 24 V, 48 V AC: 24 V, 110 V, 220 V
<b>Contact Rating:</b>	<b>Voltage:</b> 230 VAC / 30 VDC <b>Current:</b> 5 Amp
<b>Fuse Cartridge Size:</b>	5 X 20

Channel	Type
1	3R104
2	3R158
4	3R105
8	3R081
16	3R268

#### Design Options:

- Without Socket / With Socket
- Without / With Fuse at Pole
- Without Loop / Negative Loop / Positive Loop

4 CHANGEOVER

### SPECIFICATION

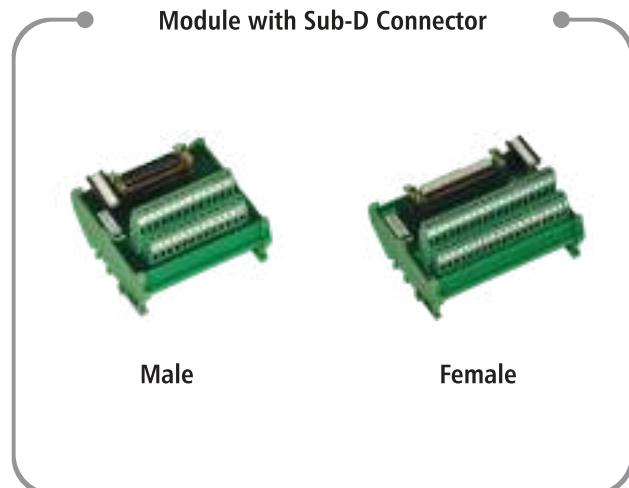

<b>Relay Make:</b>	OMRON or Equivalent
<b>Coil Voltage:</b>	DC: 24 V AC: 110 V, 220 V
<b>Contact Rating:</b>	<b>Voltage:</b> 230 VAC / 30 VDC <b>Current:</b> 3 Amp
<b>Fuse Cartridge Size:</b>	5 X 20

Channel	Type
1	3R177
2	3R356
4	3R368
8	3R370

#### Design Options:

- Without Socket / With Socket
- Without / With Fuse at Pole
- Without Loop / Negative Loop / Positive Loop

## DIN RAIL MOUNTED INTERFACE MODULES

Ordering Information Sub-D Connectors			
No. of Pins	Type		Dimensions LxWxH (mm)
	Male	Female	
9	3 RMI 9 DM	3 RMI 9 DF	47X77.25X64
15	3 RMI 15 DM	3 RMI 15 DF	68X77.25X64
25	3 RMI 25 DM	3 RMI 25 DF	90X77.25X64
37	3 RMI 37 DM	3 RMI 37 DF	112X77.25X64
50	3 RMI 50 DM	3 RMI 50 DF	56X77.25X64

WE CAN ALSO PROVIDE RIGHT ANGLED SUB-D CONNECTORS WITH THE ABOVE CONFIGURATION

Rating		
Wire Range	Current	Voltage
0.5 - 2.5 sq.mm 22-14 AWG	1.5 AMPS	250 VAC

Ordering Information IDC / FRC (header) Connectors		
No. of Pins	Type	Dimensions LxWxH (mm)
10	3 RMI 10 I	45X77.25X64
14	3 RMI 14 I	68X77.25X64
16	3 RMI 16 I	68X77.25X64
20	3 RMI 20 I	90X77.25X64
26	3 RMI 26 I	90X77.25X64
34	3 RMI 34 I	112X77.25X64
40	3 RMI 40 I	135X77.25X64
50	3 RMI 50 I	156X77.25X64
64	3 RMI 64 I	179X77.25X64

## ORDERING EXAMPLE

8 Channel 1 Changeover Relay Module with O/E/N Relays with socket for plug in type arrangement & Ground Coil Terminals are shorted / common (negative looping on Coil Side) Coil Voltage 24 VDC.

3R126	0	L	0	D1	Relay Make	Socket / Base	Fuse at Pole	Coil Voltage	NOTES
O O / E / N R Finder X Others (Specify)	O Without Socket L with Socket	O Without Fuse F with Fuse	DO 12 VDC D1 24 VDC D2 48 VDC D3 110 VDC D4 220 VDC	A0 12 VAC A1 24 VAC A2 48 VAC A3 110 VAC A4 220 VAC	Please specify Relay Make, Coil Voltage & required Looping at time of Ordering.  We can also provide modules with relays recommended				

WE CAN PROVIDE ANY LEVEL OF CUSTOMIZATION FOR INTERFACE MODULES.

## RELAY TERMINALS UNITS

1 CHANGEOVER ELECTROMECHANICAL  
6.2mm RELAY TERMINAL UNIT

Base Unit	SR 24 V ADC 1 CO	SR 240 V ADC 1 CO
Pitch (in mm)	6.2	
Dimension(Hight x Width)(in mm)	91.5 x 88.2	
Connection Possibility	2.5 sq mm	
Screw Size	M 2.6	
Torque	0.4 Nm	
Relay Actuation Data		
Nominal Voltage (Vn) to actuate	24 V DC / AC	220 V DC / AC
Nominal Voltage (In) to actuate	10 mA	15 mA
Contact Data		
Contact Rating	6 A, 250 VAC / 30 VDC	
Compatible Contact Arrangement	1 FROM C	

2 CHANGEOVER ELECTROMECHANICAL  
14.5mm RELAY TERMINAL UNIT

Base Unit	SR 24 V ADC 2 CO	SR 240 V ADC 2 CO
Pitch (in mm)	14.5	
Dimension(Hight x Width)(in mm)	91.5 x 88.2	
Connection Possibility	2.5 sq mm	
Screw Size	M 2.6	
Torque	0.4 Nm	
Relay Actuation Data		
Nominal Voltage (Vn) to actuate	24 V DC / AC	220 V DC / AC
Nominal Voltage (In) to actuate	25 mA	15 mA
Contact Data		
Contact Rating	2x6 A, 250 V AC / 30 V DC	
Compatible Contact Arrangement	2 FROM C	

SOLID STATE  
6.2 mm RELAY TERMINAL UNIT

Base Unit	SR 24 VDD 24 SSR	SR 240 VAD 24 SSR
Pitch (in mm)	6.2	
Dimension(Hight x Width)(in mm)	91.5 x 88.2	
Connection Possibility	2.5 sq mm	
Screw Size	M 2.6	
Torque	0.4 Nm	
Relay Actuation Data		
Input Control Voltage	3 - 32 VDC	3 - 32 VDC
Input Control Supply Current	12 mA	12 mA
Contact Data		
Rated Voltage	5 - 100 VDC	24 - 280 VAC
Rated Current	2 A @ 55°C	2 A @ 55°C

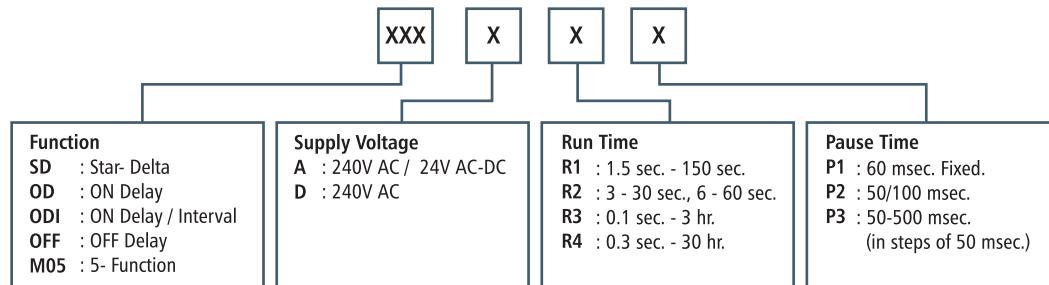

## TIMERS

### Timer Code Description

### FEATURES

- 17.5 mm DIN Rail Housing.
- Settable Time Ranges.
- Front knobs for Time Range, Time Scale & Mode Setting.
- Slim, Space Saving Design.
- LED indication for Power ON.
- LED indication for Relay ON.
- Sealable Front Cover for Temper Proofing.
- Provision of Multi-meter prob for parameters measurement.

## INSULATED LUGS

### Insulated Twin End & Cord End Lugs

#### Features

- Material : Copper
- High Conductivity
- Insulating Material: Polyamide
- Corrosion Resistant
- Easy wiring with conical funnel entry
- Surface : Tin Plated
- CE Marked
